# APPENDIX A PPONA RISK RANKING AND METHODOLOGY

### **PPONA Risk Ranking and Methodology**

#### **PPONA Findings:**

Through the course of performing PPONA's, the NASA AP2 Office identified hundreds of opportunities across all the NASA Centers. Many of the needs identified related to common processes such as painting, cleaning, maintenance and machining. Although varying in criticality and volume, all PPONA's identified the need for NASA Centers to "Input Materials Replacement for General Cleaning, Wipe-Cleaning and Precision Cleaning".

#### **Methodology for the Prioritization of Needs:**

To assist NASA AP2 Office personnel in identifying and prioritizing the implementation of potential P2 projects at all NASA Centers, a "Pollution Prevention Opportunity Prioritization Table" (PPOPT) was developed. To better understand and identify potential P2 opportunities, the PPOPT was applied to resident routine and non-routine operations within NASA Centers.

The PPOPT uses an objective scoring system to assign numerical values to process specific chemical constituents. These values are assigned to the following three categories:

- Perceived health effect(s)
- Potential environmental impact(s)
- Actual disposal impact(s)

Numerical risk/hazard ratings were assigned for each identified process constituent. Assignments reflect the perceived hazard(s) and/or risk(s) associated with the targeted constituent. Scoring values used for prioritization are provided in Table A.1 and Table A.2.

A compilation PPOPT of all solvent cleaning related opportunities across NASA is captured within Table 1.2.1 in Section 1.2 of this report. For ease of reading, Table A.5 is identical to Table 1.2.1, and included at the end of Appendix A.

#### i. Health Effects

Health effects were determined for each constituent according to their associated risk for cancer and associated health risks. The "Monographs on the Evaluation of the Carcinogenic Risk of Chemicals to Man" and the "Integrated Risk Information System" (IRIS) were both utilized during numerical risk/hazard assignment for cancer. Potential health effects were numerically ranked using the "National Fire Protection Association" (NFPA) Health Ranking System and OSHA Permissible Exposure Limit. Definitions relating to health effects are listed in Table A.1.

#### Cancer Risk

To quantify human health risks, chemicals are characterized as carcinogens (i.e. chemicals with demonstrated propensity for cancer induction) and non-carcinogens. Since carcinogens tend to dominate public concerns about health risk, they will receive the highest score. Due to a lack of experimental data, several hazardous constituents appearing within the PPOPT were determined to have unclassifiable carcinogen rankings.

The experimental research effort involved in developing a new dose-response relationship for a toxic substance takes considerable time. To determine cancer risk, information from International Agency for Research on Cancer (IARC): "Monographs on the Evaluation of the Carcinogenic Risk of Chemicals to Man" and United States Environmental Protection Agency: "Integrated Risk Information System" was used. These rankings ranged from zero to four. The following values were assigned: "0" = non-carcinogenic; "1" = unclassifiable as to carcinogenity; "2" = possible carcinogen; "3" = probable carcinogen; and "4" = human carcinogen. Scores for cancer risk are provided in Table A.3.

#### National Fire Protection Association Health Rating

The hazard posed by a chemical or waste is a function of its toxicity, mobility and persistence. To understand potential health effects of a chemical, the hazard rating (the intrinsic capability of a hazardous chemical to cause harm) should be determined. Sources used to determine health risk include NFPA Chemical Hazard Labels and a Chemical Container Label Database maintained by Genium Publishing Corporation. The NFPA Chemical Hazard Label provides the health, flammability and reactivity hazards of chemicals. As with the IARC and IRIS systems, the NFPA numeric values ranged from zero to four. An assigned value of "0" indicates the lowest hazard potential contrasted by an assigned value of "4". A value of "4" represents the most significant health hazard. Scores based on the NFPA Chemical Hazard Label are provided in Table A.3.

#### OSHA Permissible Exposure Limit

The Occupational Safety and Health Administration (OSHA) have established "Permissible Exposure Limits" (PELs). Permissible Exposure Limits have been calculated from data sets for exposure to a chemical hazard. An exposure limit may be a time-weighted average (TWA) or a maximum concentration exposure limit. OSHA PEL values are enforceable under federal law and should not be exceeded during an eight-hour workday. In addition, OSHA PEL values are intended to express the harmful effects of chemical exposure. Chemicals with low PELs have a greater risk of causing negative health effects. OSHA PEL numeric values were assigned scores ranging from zero to four. An assigned value of "0" indicates a chemical with a high OSHA PEL. An assigned value of "4" represents a chemical with a low OSHA PEL. Scores relating to OHSA Permissible Exposure Limits are provided in Table A.3.

| Cancer Risk                           | Health                                   | OSHA PEL           |
|---------------------------------------|--|--------------------|
| 4= Human carcinogen                   | 4= May be fatal on<br>short exposure     | 4= 0 to 1ppm       |
| 3= Probable carcinogen                | 3= Corrosive or toxic                    | 3= 2ppm to 10ppm   |
| 2= Possible carcinogen                | 2= May be harmful if inhaled or absorbed | 2= 11ppm to 50ppm  |
| 1= Unclassifiable as to carcinogenity | 1= May be irritating                     | 1= 51ppm to 500ppm |
| 0= Non-carcinogen                     | 0= Non-unusual hazard                    | 0= > 500ppm        |

**Table A.1: Health Effects** 

#### ii. Environmental Impact

Each hazardous constituent was evaluated for its potential to impact the environment through accidental release and/or fugitive emissions. Five methods of environmental fate and transport were evaluated during environmental impact analysis. They include Atmospheric Fate, Terrestrial Fate, Soil Mobility, Atmospheric Fate and Bio-concentration Factor

Numerical values used for environmental impact assignment were obtained from the "Hazardous Substance Data Bank" (HSDB), a data file within the "Toxicology Data Network" (TOXNET®). The National Library of Medicine (NLM) maintains TOXNET®. Definitions relating to environmental impact are provided in Table A.2.

#### Atmospheric Fate

Hazardous constituents are discharged to the atmosphere as gases or particulate matter. Once introduced, they undergo chemical transformations that deleteriously affect the atmosphere. Since transformations vary between chemicals, the extent of impact occurring in the atmosphere relates to chemical persistence.

Atmospheric fate scores range from zero to seven. Hazardous constituents with a longer half-life receive a higher score. Since the atmospheric half-life of an ODS exceeds three years, a score of seven was assigned. In addition, it was determined that chemical degradation by reaction with hydroxyl radicals or gravitational settling is responsible for reducing or eliminating hazardous constituents from the atmosphere. Scores relating to atmospheric persistence are provided in Table A.4.

#### Terrestrial Fate

Another mechanism by which hazardous constituents can be transported is volatilization. Volatilization is the transfer of a chemical substance from a liquid phase to a gaseous phase. Vapor pressure provides an indication on the extent that hazardous constituent will volatilize. Soil and environmental conditions influence the vapor pressure of a contaminant. Hazardous constituents with higher vapor pressures are easily transported through soil to groundwater.

Scores assigned for terrestrial fate range from zero to one. The following values were assigned: "0" = stable in soil; "0.5" = biodegradation and leaching; and "1" = volatilization and leaching. Stable in soil refers to hazardous constituents that remain in the upper layer (two to five cm) of soil. Biodegradation and leaching refers to hazardous constituents that undergo biodegradation. Due to biodegradation, it is likely that hazardous constituents will not reach groundwater. Volatilization and leaching represents hazardous constituents that are transported to groundwater. Scores relating to terrestrial fate are provided in Table A.4.

#### Soil Mobility

One of the most important processes determining how hazardous constituents are transported in the subsurface is adsorption. Adsorption is the adherence of atoms, ions or molecules of a gas or liquid to the surface of another substance. If a hazardous constituent is strongly adsorbed to soil, the contaminant is relatively immobile and will not migrate within the soil. If the contaminant is weakly adsorbed, it is relatively mobile and may contaminate groundwater. Soil adsorption rates are based on scientifically determined Koc values. The scores assigned for soil mobility range from zero (very high adsorption) to seven (very low or no adsorption). Hazardous constituents scored between one through six were determined to have soil adsorption values between the two extremes. Scores relating to soil mobility are provided in Table A.4.

#### Aquatic Fate

Once a hazardous constituent is introduced to an aquatic system, it may undergo volatilization. Volatilization half-life refers to the time required for half of a hazardous constituent to undergo volatilization. Scores for aquatic fate range from zero (half-life of less than one day) to seven (deposited in sediment). A score of zero through six represents hazardous constituents that have a volatilization half-life. A score of seven represents hazardous constituents that undergo sediment deposition. Sediment deposition was assigned the highest score due to probable bioaccumulation within an aquatic system. Scores relating to aquatic fate are provided in Table A.4.

#### Bio-concentration Factor

The bio-concentration factor indicates the amount of a chemical that is likely to accumulate in aquatic organisms. It varies from species to species and is affected by the organism's metabolism. Scores assigned for the bio-concentration factor range from zero (no bio-concentration) to seven (very high bio-concentration). The bio-concentration factor is an essential component in determining risk. Scores relating to bio-concentration factor are provided in Table A.4.

**Table A.2: Environmental Impact** 

| Terrestrial Fate        | Aquatic Fate      | Atmospheric Fate   | Soil Mobility       | Bio-concentration   |
|-------------------------|-------------------|--------------------|---------------------|---------------------|
| 1= Volatilization       | 7= Deposited      |                    |                     |                     |
| and Leaching            | in sediment       | 7= 3 years and up  | 7= Very high        | 7= Very high        |
| 0.5= Biodegradation and | 6= 36 days and up | 6= 1 to 3 years    | 6= High             | 6= High             |
| Leaching and/or         | 5= 29 to 35 days  | 5= 181 to 365 days | 5= Moderate to High | 5= Moderate to High |
| Volatilization          | 4= 22 to 28 days  | 4= 61 to 180 days  | 4= Moderate         | 4= Moderate         |
| 0= Stable in soil       | 3= 15 to 21 days  | 3= 15 to 60 days   | 3= Low to Moderate  | 3= Low to Moderate  |
|                         | 2= 8 to 14 days   | 2= 1 to 14 days    | 2= Low              | 2= Low              |
|                         | 1= 1 to 7 days    | 1= < 1 day         | 1= None to Low      | 1= None to Low      |
|                         |                   | 0= Gravitational   |                     |                     |
|                         | 0 = < 1  day      | settling           | 0= None             | 0= None             |

#### iii. Disposal Impact

NASA has emphasized the importance of implementing cost-effective waste reduction strategies. In order to accomplish these goals, hazardous waste generation and subsequent disposal impacts must be examined.

#### Hazardous Waste

To determine disposal impacts, the NASA AP2 Office obtained the hazardous waste generation reports for all NASA Centers. After reviewing these reports, it was determined that in many cases identified resident waste streams can not be confidently linked to specific processes within facilities due to the fact that waste streams are often mixed prior to ultimate disposal. As a result, it is difficult to assign numerical rankings for waste disposal. Since numerical assignment is not practical, Pollution Prevention Opportunity Prioritization did not include disposal impacts for the majority of the NASA Centers.

The following tables represent a compilation of the data collected while performing PPONA's at all NASA Facilities. Final PPONA reports included all opportunities identified within the Center, for the purposes of this document only solvent cleaning related opportunities were complied below. These tables show a variety of solvents and constituents within solvent-blends that are used for cleaning. The four benchmarks used for cleaning efficiency testing are highlighted within each table. It should be noted that while these tables are a compilation of constituents identified during PPONA's they do not include all possible constituents nor do they express the current inventory of constituents found within these processes at NASA Centers. Since the completion of the PPONA's many Centers have proactively implemented recommendations found within the PPONA reports for their Facility and therefore, some of these constituents have been replaced with environmentally preferable alternatives.

# Table A.3: PPONA Health Effects Worksheet with Scores (Constituents found within cleaning processes across NASA Centers.)

| Hazardous Constituent                   | Carcinogen<br>Ranking <sup>(1, 2)</sup> | Health <sup>(3, 4)</sup> | OSHA PEL <sup>(5)</sup> | Score    |
|---|---|--------------------------|-------------------------|----------|
| 1,1,1,2-Tetrafluoroethane               | 1                                       | 1                        | 0                       | 2        |
| 1,1,1-Trichloroethane                   | 1                                       | 2                        | 1                       | 4        |
| 1,2,4-Trimethylbenzene                  | 1                                       | 1                        | 2                       | 4        |
| 1,2-Butylene Oxide                      | 1                                       | 2                        | 3                       | 6        |
| 1,3-Dioxolane                           | 1                                       | 2                        | 0                       | 3        |
| 1,4-Dichlorobenzene                     | 2                                       | 2                        | 1                       | 5        |
| 1,4-Dioxane                             | 3                                       | 2                        | 1                       | 6        |
| 1-Butanol                               | 1                                       | 1                        | 1                       | 3        |
| 1-Methyl-2-Pyrrolidinone                | 1                                       | 2                        | 3                       | 6        |
| 2,4-Toluene Diisocyanate                | 2                                       | 3                        | 4                       | 9        |
| Acetic Acid                             | 1                                       | 3                        | 3                       | 7        |
| Acetone                                 | 1                                       | 1                        | 0                       | 2        |
| Benzene                                 | 4                                       | 2                        | 3                       | 9        |
| Butane                                  | 1                                       | 1                        | 0                       | 2        |
| CFC-113 (Trichlorotrifluoroethane)      | 1                                       | 2                        | 0                       | 3        |
| Cyclohexanone                           | 1                                       | 2                        | 1                       | 4        |
| Dichloromethane                         | 2                                       | 2                        | 2                       | 6        |
| Diethylene Glycol Mononbutyl Ether      | 1                                       | 2                        | 1                       | 4        |
| Dipropylene Glycol Methyl Ether         | 1                                       | 0                        | 1                       | 2        |
| Ethanol                                 | 1                                       | 1                        | 0                       | 2        |
| Ethyl acetate                           | 1                                       | 1                        | 1                       | 3        |
| Ethyl Benzene                           | 1                                       | 2                        | 1                       | 4        |
| Ethylene Glycol                         | 1                                       | 1                        | 2                       | 4        |
| Ethylene Glycol Monobutyl Ether         | 1                                       | 2                        | 2                       | 5        |
| Ethylene Glycol Monoethyl Ether Acetate | 1                                       | 2                        | 1                       | 4        |
| Ethylene Glycol Mono-N-Butyl Ether      | 1                                       | 2                        | 2                       | 5        |
| Heptane                                 | 1                                       | 1                        | 1                       | 3        |
| Hydroquinone                            | 1                                       | 2                        | 4                       | 7        |
| Isoamyl Methyl Ketone                   | 1                                       | 1                        | 2                       | 4        |
| Isobutane                               | 1                                       | 1                        | 0                       | 2        |
| Isobutalie Isobutyl Acetate             | 1                                       | 1                        | 2                       | 4        |
| Isobutyl Acetate Isobutyl Alcohol       | 1 1                                     | 1                        | 1                       | 3        |

### **Table A.5: Pollution Prevention Opportunity Prioritization Table**

(Constituents found within cleaning processes across NASA Centers.)

#### **Recommended Action:**

Input Material Substitution, Material and Waste Reduction, Out-Process Recycling/Reuse

#### **Related Processes:**

Hazardous Constituents used in Part Cleaning and Wiping Procedures

#### **Related Activities:**

General cleaning, surface preparation, machining, metal finishing, coating removal, vehicle/equipment maintenance, precision cleaning, coating application, sealing/adhesive cleaning and other cleaning/degreasing activities.

| Hazardous Constituent                             | Health | Environmental | Total      |
|---|--------|---------------|------------|
| 1,1,1,2-Tetrafluoroethane                         | 2      | 11            | 13         |

## APPENDIX B

# SITE-TESTED CHEMISTRIES MATERIAL SAFETY DATA SHEETS / TECHNICAL DATA SHEETS

### Armakleen M-Aero Church & Dwight

TRANSPORTATION (SPILL):

1-800-468-1760

#### Armakleen® M-Aero

#### MATERIAL SAFETY DATA SHEET FOR USA AND CANADA

**SECTION 1: PRODUCT AND COMPANY IDENTIFICATION** 

PRODUCT NAME: Armakleen® M-Aero

**SYNONYM(S):** Not available.

PRODUCT PART

NUMBERS: 6330, 6430

**PRODUCT USE:** Aqueous, alkaline, concentrated cleaner that is to be diluted with

water. If this product is used in combination with other products,

refer to the Material Safety Data Sheets for those products.

24-HOUR EMERGENCY PHONE NUMBERS

These numbers are for

emergency use only. If

you desire non-emergency 1-800-752-7869

product information,

please call a phone number listed below.

#### **SECTION 3: HAZARDS IDENTIFICATION**

#### **EMERGENCY OVERVIEW**

#### **APPEARANCE**

Liquid, clear, tan color, and mild detergent odor.

#### **CAUTION!**

#### **HEALTH HAZARDS**

May irritate the respiratory tract (nose, throat, and lungs), eyes, and skin.

#### POTENTIAL HEALTH EFFECTS

**INHALATION** High concentrations of vapor or mist may irritate the respiratory tract

(BREATHING): (nose, throat, and lungs).

**EYES:** May cause irritation

**SKIN:** May cause irritation. Not likely to be absorbed through the skin in harmful

amounts

#### **INGESTION**

**(SWALLOWING):** May be harmful if swallowed. May cause vomiting and/or diarrhea. **MEDICAL CONDITIONS** Individuals with pre-existing respiratory tract (nose, throat, and

Revision 11/03 MSDS Form No. 82796 - Page 2 of 9

**AGGRAVATED BY** 

lungs), eye, and/or skin disorders may have increased susceptibility

**EXPOSURE:** 

to the effects of exposure.

CHRONIC:

Prolonged or repeated skin contact may cause drying, cracking, redness,

itching, and/or swelling (dermatitis).

**CANCER** 

No known carcinogenicity. For more information, see **SECTION 11**:

**INFORMATION:** 

CARCINOGENICITY.

#### POTENTIAL ENVIRONMENTAL EFFECTS

Not available. Also see SECTION 12: ECOLOGICAL INFORMATION.

#### **SECTION 4: FIRST AID MEASURES**

INHALATION: (BREATHING)

Remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Oxygen should only be administered by qualified personnel. Someone should stay with victim. Get medical attention if

breathing difficulty persists.

**EYES:** 

If irritation or redness from exposure to vapor develops, move away from exposure into fresh air and flush with water for 5 minutes. Upon direct contact with liquid, immediately flush eyes with plenty of lukewarm water, bolding evelids apart, for 15 minutes. Get medical attention

holding eyelids apart, for 15 minutes. Get medical attention.

SKIN:

Remove affected clothing and shoes. Wash skin thoroughly with soap and water. Get medical attention if irritation or pain develops or persists.

INGESTION: (SWALLOWING)

Do NOT induce vomiting. Immediately get medical attention. Call medical emergency telephone number (1-800-752-7869) for additional information. If conscious, give water to drink. If spontaneous vomiting occurs, keep head below hips to avoid breathing the product into the lungs. Never give anything to an unconscious person by mouth.

NOTE TO PHYSICIANS:

Treat symptomatically and supportively. Ingesting large amounts may cause systemic alkalosis. Treatment may vary with condition of victim and specifics of incident. Call 1-800-752-7869.

#### **SECTION 5: FIRE FIGHTING MEASURES**

**FLASH POINT:** greater than 212°F (100°C)

FLAMMABLE LIMITS IN AIR: Not applicable.

**AUTOIGNITION** 

**TEMPERATURE:** Not applicable.

**HAZARDOUS COMBUSTION** 

PRODUCTS:

Product itself does not burn, but may decompose upon heating to produce carbon monoxide, carbon dioxide, sulfur

oxides, and nitrogen oxides.

CONDITIONS OF

**FLAMMABILITY:** Product will not burn.

**EXTINGUISHING MEDIA:** Not applicable.

NFPA 704

HAZARD This information is intended solely for the use by individuals

**IDENTIFICATION:** trained in this system.

**FIRE FIGHTING** Keep storage containers cool with water spray.

**INSTRUCTIONS:** A positive-pressure, self-contained breathing apparatus

(SCBA) and full-body protective equipment are required for

fire emergencies.

FIRE AND

**EXPLOSION HAZARDS:** 

Heated containers may rupture. "Empty" containers may retain residue and can be dangerous. Not sensitive to

mechanical impact or static discharge.

#### **SECTION 6: ACCIDENTAL RELEASE MEASURES**

Spilled product is slippery. Do not touch or walk through spilled product. Stop leak if you can do it without risk. Wear protective equipment and provide engineering controls as specified in **SECTION 8: EXPOSURE CONTROLS/PERSONAL PROTECTION**. Isolate hazard area. Keep unnecessary and unprotected personnel from entering. Ventilate area and avoid breathing vapor or mist. Contain away from surface waters and sewers. Contain spill as a liquid for possible recovery or sorb with compatible sorbent material and shovel with a clean tool into a sealable container for disposal.

Additionally, for large spills: Dike far ahead of liquid spill for collection and later disposal.

There may be additional regulatory reporting requirements associated with spills, leaks, or releases of this product. Also see **SECTION 15: REGULATORY INFORMATION**.

**SECTION 7: HANDLING AND STORAGE** 

**HANDLING:** Use clean tools. Do not breathe vapor or mist. Use in a well ventilated area.

Avoid contact with eyes, skin, clothing, and shoes.

**SHIPPING AND** Keep container tightly closed when not in use and during transport.

**STORING:** Store containers in a cool, dry place. Empty product containers may retain

product residue and can be dangerous.

SECTION 8: EXPOSURE CONTROLS/PERSONAL PROTECTION

**ENGINEERING** Provide general ventilation needed to maintain concentration of

**CONTROLS:** vapor or mist below applicable exposure limits. Where adequate general

ventilation is unavailable, use process enclosures, local exhaust ventilation, or other engineering controls to control airborne levels below recommended

exposure limits.

PERSONAL PROTECTIVE EQUIPMENT

**RESPIRATORY** Use NIOSH-certified, combination N-, P-, or R- series particulate filter

**PROTECTION:** respiratory protective equipment when concentration of vapor or mist exceeds

applicable exposure limits. Selection and use of respiratory protective equipment should be in accordance in the USA with OSHA General Industry

Standard 29 CFR 1910.134; or in Canada with CSA Standard Z94.4.

**EYE** Where eye contact is likely, wear chemical goggles; contact lens

**PROTECTION:** use is not recommended.

**HYGIENE:** 

**SKIN** Where skin contact is likely, wear nitrile, neoprene, or equivalent

PROTECTION: protective gloves; use of polyvinyl alcohol (PVA), natural rubber, or equivalent

gloves is not recommended.

To avoid skin contact where spills and splashes are likely, wear appropriate chemical-resistant faceshield, boots, apron, whole body suits, or other

protective elething

protective clothing.

**PERSONAL** Use good personal hygiene. Wash thoroughly with soap and water after

handling and before eating, drinking, or using tobacco products. Clean affected clothing, shoes, and protective equipment before reuse. Discard affected clothing, shoes, or protective equipment if they cannot be thoroughly

cleaned. Discard leather articles, such as shoes, saturated with the product.

OTHER Where spills and splashes are likely, facilities storing or using this product

Revision 11/03 MSDS Form No. 82796 - Page 5 of 9

**PROTECTIVE** should be equipped with an emergency eyewash and shower, both equipped

**EQUIPMENT:** with clean water, in the immediate work area.

**SECTION 9: PHYSICAL AND CHEMICAL PROPERTIES** 

PHYSICAL STATE.

**APPEARANCE, AND ODOR:** Liquid, clear, tan color, and mild detergent odor.

**ODOR THRESHOLD:** Not available.

MOLECULAR WEIGHT: Not applicable.

**SPECIFIC GRAVITY:** 1.05 (water = 1)

**DENSITY:** 8.8 LB/US gal (1050 g/L)

**VAPOR DENSITY:** less than 1 (air = 1)

**VAPOR PRESSURE:** 17.5 mm Hg at 68°F (20°C) (approximately)

**BOILING POINT:**  $212^{\circ}F (100^{\circ}C)$ 

**FREEZING/MELTING POINT:**  $32^{\circ}F(0^{\circ}C)$ 

**pH:** 11.6

**EVAPORATION RATE**: Less than 1 (butyl acetate = 1)

**SOLUBILITY IN WATER:** Complete.

**FLASH POINT:** greater than 212°F (100°C)

FLAMMABLE LIMITS IN AIR: Not applicable.

**AUTOIGNITION TEMPERATURE:** Not applicable.

**SECTION 10: STABILITY AND REACTIVITY** 

**STABILITY:** Stable under normal temperatures and pressures.

**INCOMPATIBILITY:** Avoid acids, oxidizing agents, or reducing agents.

**REACTIVITY:** Polymerization is not known to occur under normal temperatures and

pressures. Not reactive with water.

**HAZARDOUS** 

DECOMPOSITION

None under normal temperatures and pressures. See also **SECTION 5**:

PRODUCTS:

HAZARDOUS COMBUSTION PRODUCTS.

**SECTION 11: TOXICOLOGICAL INFORMATION** 

**SENSITIZATION:** Based on best current information, there is no known human

sensitization associated with this product.

**MUTAGENICITY:** Based on best current information, there is no known mutagenicity

associated with this product.

**CARCINOGENICITY:** Based on best current information, there is no known carcinogenicity

as regulated by OSHA; as categorized by ACGIH A1 or A2

substances; as categorized by IARC Group 1, Group 2A, or Group 2B agents; or as listed by NTP as either known carcinogens or substances for which there is limited evidence of carcinogenicity in humans or sufficient evidence of carcinogenicity in experimental

animals.

**REPRODUCTIVE** 

**TOXICITY:** 

Based on best current information, there is no known reproductive

toxicity associated with this product.

**TERATOGENICITY:** Based on best current information, there is no known teratogenicity

associated with this product.

**TOXICOLOGICALLY** 

SYNERGISTIC PRODUCT(S):

Based on best current information, there are no known toxicologically synergistic products associated with this

product.

SECTION 12: ECOLOGICAL INFORMATION

**ECOTOXICITY:** No data available.

OCTANOL/WATER

**PARTITION COEFFICIENT:** Not available.

**VOLATILE ORGANIC** Contains 13.7 g/L VOC (as soaps and detergents)

**COMPOUNDS:** as per EPA Method 24

**SECTION 13: DISPOSAL CONSIDERATIONS** 

**DISPOSAL:** Dispose in accordance with federal, state, provincial, and local

regulations. Regulations may also apply to empty containers. The responsibility for proper waste disposal lies with the owner of the waste. Contact Safety-Kleen regarding recycling or proper disposal.

**USEPA WASTE** 

CODE(S):

This product, if discarded, is not expected to be a characteristic or listed hazardous waste. Processing, use, or contamination by the user may change the waste code(s) applicable to the disposal of this

product.

**SECTION 14: TRANSPORT INFORMATION** 

**DOT:** Not regulated.

**TDG:** Not regulated.

**EMERGENCY RESPONSE** 

**GUIDE NUMBER:** 

Not applicable.

Reference North American Emergency Response Guidebook

**SECTION 15: REGULATORY INFORMATION** 

**USA REGULATIONS** 

SARA SECTIONS 302 AND 304: This product does not contain any "extremely hazardous substances"

listed pursuant to Title III of the Superfund Amendments and

Reauthorization Act of 1986 (SARA) Section 302 or Section 304 as

identified in 40 CFR Part 355, Appendix A and B.

SARA SECTIONS

311 AND 312:

This product poses the following health hazards as defined in

40 CFR Part 370 and is subject to the requirements of sections 311 and 312 of Title III of the Superfund Amendments and Reauthorization Act of

1986 (SARA):

Immediate (Acute) Health Hazard

SARA SECTION 313:

This product does not contain toxic chemicals subject to the

requirements of section 313 of Title III of the Superfund Amendments and

Reauthorization Act of 1986 and 40 CFR Part 372.

**CERCLA:** This product contains the following "hazardous substance" listed under

> the Comprehensive Environmental Response, compensation and Liability Act of 1980 (CERCLA) in 40 CFR Part 302, Table 302.4 with the following

reportable quantity (RQ):

Material CAS RQ

Sodium hydroxide 1310-73-2 1000 LB (454 kg)

All the components of this product are listed on, or are automatically TSCA:

included as "naturally occurring chemical substances" on, or exempted

from the requirement to be listed on, the TSCA Inventory.

**CALIFORNIA:** This product does not contain detectable amounts of any chemical known

to the State of California to cause cancer.

This product does not contain detectable amounts of any chemical known

to the State of California to cause birth defects or other reproductive

harm

#### **CANADIAN REGULATIONS**

This product has been classified in accordance with the hazard criteria of the Controlled Products Regulations (CPR) and the MSDS contains all the information required by the CPR.

WHMIS: D<sub>2</sub>B

**CANADIAN ENVIRONMENTAL** 

(CEPA):

**PROTECTION ACT** All the components of this product are listed on, or are automatically included as "substances occurring in nature" on, or are exempted from the

requirement to be listed on, the Canadian Domestic Substances List

(DSL).

**SECTION 16: OTHER INFORMATION** 

**REVISION INFORMATION:** Regulatory review of content.

LABEL/OTHER INFORMATION: Not available.

User assumes all risks incident to the use of this product. To the best of our knowledge, the information contained herein is accurate. #### 3. HAZARDS IDENTIFICATION

#### SYMPTOMS/EFFECTS OF OVEREXPOSURE

**Inhalation:** Low volatility makes vapor inhalation unlikely unless the product is heated.

Vapors or finely misted materials may irritate the mucous membranes and

cause irritation, dizziness, and nausea.

**Ingestion:** Low order of toxicity. May cause mild nausea.

**Skin:** Repeated or prolonged contact with skin may cause very mild irritation.

**Eyes:** Contact with eyes may cause mild irritation.

**Listed Carcinogens:** None

#### 4. FIRST AID MEASURES

**Inhalation:** Remove to fresh air. If not breathing, give artificial respiration. If breathing is

difficult, give oxygen. Consult a physician.

**Ingestion:** Do not induce vomiting. Give one or two glasses of water to drink. If gastro-

intestinal symptoms develop, seek medical attention. Never give anything by

mouth to an unconscious person.

**Skin:** Remove contaminated clothing. Thoroughly wash affected area with soap and

water

**Eyes:** Immediately flush eyes with water for 15 minutes. Call a physician if signs of

irritation appear.

#### 5. FIRE FIGHTING MEASURES

**Extinguishing Media:** Dry chemical, chemical foam, carbon dioxide. Class BC, ABC fire

extinguisher.

**Special Fire Fighting Procedures:** Self-contained positive pressure breathing

apparatus and protective clothing should be worn in fighting fires involving chemicals.

**Unusual Fire and Explosions Hazard:** Exercise care when disposing of rags

contaminated with this product. Use normal

precautions appropriate for oily rags.

#### 6. ACCIDENTAL RELEASE MEASURES

Absorb spill with inert material, then place in chemical waste container. For large spills, dike for later disposal. Observe government regulations.

\_

Registered trademark of Petroferm Inc.

AXAREL 58 3/8/04

#### 7. HANDLING AND STORAGE

Store in original container, preferably in a cool, ventilated, fire-resistant building. Avoid overheating or freezing. Since empty containers may retain product residues (vapor, liquid, or solid) all label precautions must be observed.

#### 8. EXPOSURE CONTROLS - PERSONAL PROTECTION

**Respiratory:** Use NIOSH/MSHA approved respirator if ventilation is not sufficient and if

mists are generated.

**Ventilation:** Local exhaust can be effective in minimizing odor. Mechanical (general)

ventilation should have an airflow of 55 CFM.

**Clothing/Glove:** Chemically resistant gloves should be used with all industrial chemicals. **Eye Protection:** Safety glasses/goggles are recommended. Provide eye bath near work site.

#### 9. PHYSICAL AND CHEMICAL PROPERTIES

citrus odor.

**Flash Point:** 185°F (ASTM D93-85, Pensky- **Flammable Limits** Not determined.

Martens Closed Cup) (% By Volume in Air):

#### 10. STABILITY AND REACTIVITY

**Stability:** AXAREL 58 is stable.

**Conditions to Avoid:** Temperatures above 400 °F (205°C).

**Incompatibility:** Strong oxidizing agents.

**Hazardous Decomposition Products:** None, other than normal products of combustion.

**Hazardous Polymerization:** Will not occur.

#### 11. TOXICOLOGICAL INFORMATION

No information available.

#### 12. ECOLOGICAL INFORMATION

No information available.

#### 13. DISPOSAL CONSIDERATIONS

Waste treat or incinerate used material in compliance with all applicable government regulations.

#### 14. TRANSPORT INFORMATION

Non-regulated.

#### 15. REGULATORY INFORMATION

The component of AXAREL 58 does not appears on any of the EPA's lists of toxic or hazardous substances, or on the SARA 313 toxic chemicals list (40 CFR 372.65).

This product contains a secondary alcohol ethoxylate which contains traces of dioxane, ethylene oxide, formaldehyde, and acetaldehyde which are listed in California's Safe Drinking Water and Toxic Enforcement Act of 1986 - Proposition as chemicals known to cause cancer, birth defects, or other reproductive harm.

**AXAREL 58** 3/8/04

# **15. REGULATORY INFORMATION (Continued)**The component of this product is listed on the TSCA inventory.

#### 3. HAZARDS IDENTIFICATION

#### SYMPTOMS/EFFECTS OF OVEREXPOSURE

**Inhalation:** Acute or chronic inhalation in unventilated areas may cause irritation of the

respiratory tract.

**Ingestion:** Low order of toxicity. May cause mild nausea and abdominal discomfort. **Skin:** Excessive skin contact will remove natural skin oils which could lead to reversible

dermatitis.

**Eyes:** Contact with eyes will cause irritation.

Listed Carcinogens: None

#### 4. FIRST AID MEASURES

**Inhalation:** Remove to fresh air. If not breathing, give artificial respiration. If breathing is

difficult, give oxygen. Consult a physician.

**Ingestion:** Do not induce vomiting. Seek medical attention.

**Skin:** Remove contaminated clothing. Thoroughly wash affected area with soap and

water; use skin cream if irritation is severe.

**Eyes:** Immediately flush eyes with water for 15 minutes. Call a physician if irritation

persists.

#### 5. FIRE FIGHTING MEASURES

**Extinguishing Media:** Dry chemical, chemical foam, carbon dioxide. Class BC, ABC fire

extinguisher.

**Special Fire Fighting Procedures:** Self-contained positive pressure breathing

apparatus and protective clothing should be worn in fighting fires involving chemicals..

**Unusual Fire and Explosions Hazard:** Exercise care when disposing of rags

contaminated with this product. Use normal

precautions appropriate for oily rags.

#### 6. ACCIDENTAL RELEASE MEASURES

Absorb spill with inert material, then place in chemical waste container. For large spills, dike for later disposal. Observe government regulations.

\_

Registered trademark of Petroferm Inc.

BIOACT MSO 3/8/04

#### 7. HANDLING AND STORAGE

Store in original container, preferably in a cool, ventilated, fire-resistant building. Avoid overheating or freezing. Avoid open flames and sparks. Since empty containers may retain product residues (vapor, liquid, or solid) all label precautions must be observed.

#### 8. EXPOSURE CONTROLS – PERSONAL PROTECTION

**Respiratory:** Use NIOSH/MSHA approved respirator if ventilation is not sufficient and if

mists are generated.

**Ventilation:** If desirable to reduce odor, mechanical (general) ventilation should have an

airflow of 55 CFM. Local exhaust can also be effective in minimizing odor.

**Clothing/Glove:** Chemically resistant gloves should be used with all industrial chemicals. **Eye Protection:** Safety glasses/goggles are recommended. Provide eye bath near work site.

#### 9. PHYSICAL AND CHEMICAL PROPERTIES

Boiling Point(760 mm Hg):  $340^{\circ}-372^{\circ}F$  Vapor Density (Air = 1): > 1

(171°-189°C)

% Volatile (By Weight): Not determined. Evaporation Rate (BUAC = 1): < 1 Specific Gravity (H<sub>2</sub>O =1):  $0.86 @ 77^{\circ}F$  Solubility in Water: Emulsifiable

 $(25^{\circ}C)$ 

**Vapor Pressure**(20°C): < 2 mm Hg **Appearance and Odor:** Colorless to light

yellow liquid with a

citrus odor.

**Flash Point:** 117°F (47°C) (ASTM D93-85. **Flammable Limits** Not determined.

Pensky-Martens Closed Cup) (% By Volume in Air):

#### 10. STABILITY AND REACTIVITY

**Stability:** BIOACT MSO is stable.

**Conditions to Avoid:** Temperatures above 340°F (171°C), sparks, and open flames.

**Incompatibility:** Strong mineral acids and strong oxidizing agents.

**Hazardous Decomposition Products:** None, other than normal products of combustion.

**Hazardous Polymerization:** Will not occur.

#### 11. TOXICOLOGICAL INFORMATION

1-Methyl-4-(1-methylethenyl)-cyclohexene

LD50/oral/rat = > 5,000 mg/kg

LD50/dermal/rabbit = > 5,000 mg/kg

#### 12. ECOLOGICAL INFORMATION

No information available.

#### 13. DISPOSAL CONSIDERATIONS

Waste treat or incinerate used material in compliance with all applicable government regulations.

#### 14. TRANSPORT INFORMATION UN-No.: 2319

IATA

UN/ID No.: 2319 Class: 3

Packaging group: III ICAO-Label: Flammable liquid Proper shipping name: Terpene hydrocarbons, N.O.S.

#### 15. REGULATORY INFORMATION

None of the components of BIOACT MSO appears on any of the EPA's lists of toxic or hazardous substances, or on the SARA 313 toxic chemicals list (40 CFR 372.65).

None of the components of this product is listed in California's Safe Drinking Water and Toxic Enforcement Act of 1986 – Proposition 65 as a chemical known to cause cancer, birth defects, or other reproductive harm.

All the components of this product are listed on the TSCA inventory.

### 16. OTHER INFORMATION

**NFPA Codes:** Health: 1 Fire: 2 Reactivity: 0

We believe that the information contained herein is current as of the date of this Material Safety Data Sheet. Since the use of this information and of these opinions and the conditions of use of the product are not within the control of Petroferm Inc., it is the user's obligation to determine the conditions of safe use of the product.

#### 3. HAZARDS IDENTIFICATION

Potential Health Effects:

EYE: May cause irritation.

SKIN: May cause irritation.

INGESTION: May cause nausea or diarrhea.

INHALATION: May cause nose and throat irritation.

CHRONIC (CANCER) INFORMATION: Unlikely to present a cancer hazard to man.

#### 4. FIRST AID MEASURES

First Aid:

INHALATION: If inhaled, remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Call a Physician.

SKIN OR EYE CONTACT: In case of eye contact, immediately wash eye with plenty of water for at least 15 minutes. Call a physician if irritation develops.

INGESTION: Drink plenty of water. Do not induce vomiting. Call a physician. Never give anything by mouth to an unconscious person.

#### 5. FIRE FIGHTING MEASURES

Non-flammable.

Extinguishing Media: As required for surrounding fire.

#### 6. ACCIDENTAL RELEASE MEASURES

Safeguards (Personnel): NOTE: Review FIRE FIGHTING MEASURES and HANDLING

PERSONNEL) sections before proceeding with clean-up. Use appropriate PERSONAL PROTECTIVE EQUIPMENT during clean-up.

Flush area with water into sewer system. Caution - may be slippery.

### 7. HANDLING AND STORAGE

Handling (Personnel): Do not get in eyes, on skin, or on clothing.

Storage: Store away from heat. Keep container closed.

# 8. EXPOSURE CONTROLS/PERSONAL PROTECTION

Engineering Controls: Use ventilation that is adequate to keep employee exposure to airborne concentrations below exposure limits.

Personal Protective Equipment: Have available and wear as appropriate: gloves, safety glasses and apron.

Exposure Guidelines Exposure Limits

None.

# 9. PHYSICAL AND CHEMICAL PROPERTIES

Physical Data

Solubility in water: 100% Specific Gravity: .996

Percent volatile : <50 g/L (diluted)

Color: Blue

Form: Slightly viscous liquid

Odor : Pleasant. PH : 8.0 - 9.0

### 10. STABILITY AND REACTIVITY

Chemical Stability: Stable.

Incompatibility with Other Materials: Incompatible with strong oxidizers.

Decomposition: Occurs with strong heat.

Polymerization: Polymerization will not occur.

### 11. TOXICOLOGICAL INFORMATION

Mixture not tested but based on components, may cause irritation to skin and eyes. Ingestion may cause nausea or diarrhea.

Inhalation may cause nose and throat irritation.

None of the components of this material are listed by IARC, NTP, OSHA, or ACGIH as carcinogens.

# 12. ECOLOGICAL INFORMATION

Biodegradable.

# 13. DISPOSAL CONSIDERATIONS

### Waste Disposal:

Treatment, storage, transportation, and disposal must be in accordance with applicable Federal, State/Provincial, and Local regulations.

### 14. TRANSPORTATION INFORMATION

**Shipping Information** 

DOT: Not regulated.

### 15. REGULATORY INFORMATION

Not classified as hazardous to users or for transport.

# U.S. Federal Regulations

CERCLA and SARA regulations (40 CFR 355, 370 and 372): Does not contain any chemicals subject to the reporting requirements of SARA 313.

TSCA Inventory Status: Reported/Included.

#### 16. OTHER INFORMATION

**NPCA-HMIS Rating** 

Health: 1

Flammability: 0 Reactivity: 0

Personal Protection rating to be supplied by user depending on use

conditions.

### STATE RIGHT-TO-KNOW LAWS

No substances on the state hazardous substances list, for the states indicated below, are used in the manufacture of products on this Material Safety Data Sheet, with the exceptions indicated. While we do not specifically analyze these products, or the raw materials used in their manufacture, for substances on various state hazardous substances lists, to the best of our knowledge the products on this Material Safety Data Sheet contain no such substances except for those specifically listed below:

WARNING: SUBSTANCES KNOWN TO THE STATE OF CALIFORNIA TO CAUSE CANCER:
None known.

WARNING: SUBSTANCES KNOWN TO THE STATE OF CALIFORNIA TO CAUSE BIRTH DEFECTS

OR OTHER REPRODUCTIVE HARM: None known.

Synonym: Methyl soyate

# 2. COMPOSITION / INFORMATION ON INGREDIENTS

CAS Number Weight % ACGIH TLV OSHA PEL

Methyl ester of soybean oil 67784-80-9 Not est. Not est.

# 3. HAZARDS IDENTIFICATION

#### **Potential Health Effects**

INHALATION: Negligible unless heated to produce vapors. Vapors or finely misted materials may irritate the mucous membranes and cause irritation, dizziness, and nausea. Remove to fresh air.

EYE CONTACT: May cause irritation. Irrigate eye with water for at least 15 to 20 minutes. Seek medical attention if symptoms persist.

SKIN CONTACT: Prolonged or repeated contact is not likely to cause significant skin irritation. Material is sometimes encountered at elevated temperatures. Thermal burns are possible.

INGESTION: No hazards anticipated from ingestion incidental to industrial exposure.

# 4. FIRST AID MEASURES

EYES: Irrigate eyes with a heavy stream of water for at least 15 to 20 minutes.

SKIN: Wash exposed areas of the body with soap and water.

INHALATION: Remove from area of exposure, seek medical attention if symptoms persist.

INGESTION: Give one or two glasses of water to drink. If gastro-intestinal symptoms develop, consult medical personnel. (Never give anything by mouth to an unconscious person.)

# 5. FIRE FIGHTING MEASURES

FLASH POINT (Method Used): > 175°C (COC) FLAMMABILITY LIMITS: None known

EXTINGUISHING MEDIA: Dry chemical, foam, halon, CO<sub>2</sub>, water spray (fog). Water stream may splash burning liquid and spread fire.

SPECIAL FIRE FIGHTING PROCEDURES: Use water spray to cool drums exposed to fire.

<sup>\*</sup> Registered trademark of Lambent Technologies Corp.

OLEOCAL ME - 130 2/1/99

UNUSUAL FIRE AND EXPLOSION HAZARDS: Firefighters should use self-contained breathing apparatus to avoid exposure to smoke and vapor.

Exercise care when disposing of rags contaminated with the product.

#### 6. ACCIDENTAL RELEASE MEASURES

SPILL CLEAN-UP PROCEDURES: Remove sources of ignition, contain spill to smallest area possible. Stop leak if possible. Pick up small spills with absorbent materials such as paper towels, "Oil Dry", sand or dirt. Recover large spills for salvage or disposal. Wash hard surfaces with safety solvent or detergent to remove remaining oil film. Greasy nature will result in a slippery surface.

# 7. HANDLING AND STORAGE

Store in closed containers between 50°F and 120°F. Keep away from oxidizing agents, excessive heat, and ignition sources. Store and use in well ventilated areas. Do not store or use near heat, spark, or flame; store out of sun. Do not puncture, drag, or slide this container. Drum is not a pressure vessel; never use pressure to empty.

# 8. EXPOSURE CONTROLS / PERSONAL PROTECTION

RESPIRATORY PROTECTION: If vapors or mists are generated, wear a NIOSH approved organic vapor/mist respirator.

PROTECTIVE CLOTHING: Safety glasses, goggles, or face shield recommended to protect eyes from mists or splashing. PVC coated gloves recommended to prevent skin contact.

OTHER PROTECTIVE MEASURES: Employees must practice good personal hygiene, washing exposed areas of skin several times daily and laundering contaminated clothing before re-use.

# 9. PHYSICAL AND CHEMICAL PROPERTIES

 $\begin{array}{lll} \mbox{Boiling Point, 760mm Hg:} & > 200 \mbox{°C} \\ \mbox{Specific Gravity, (H20=1):} & 0.88 \\ \mbox{Vapor Pressure, mm Hg:} & < 2 \\ \mbox{Vapor Density, (Air=1):} & > 1 \\ \mbox{Volatiles, \% by Volume:} & < 2\% \\ \mbox{Evaporation Rate, (Butyl Acetate=1):} & < 1 \\ \mbox{Solubility in Water, \% by Volume:} & Insoluble \\ \end{array}$ 

Appearance and Odor: Yellow liquid with a mild fatty odor

### 10. STABILITY AND REACTIVITY

GENERAL: This product is stable and hazardous polymerization will not occur.

INCOMPATIBLE MATERIALS AND CONDITIONS TO AVOID: Strong oxidizing agents

HAZARDOUS DECOMPOSITION PRODUCTS: Combustion produces carbon monoxide, carbon dioxide along with thick smoke.

#### 11. DISPOSAL CONSIDERATIONS

OLEOCAL ME - 130 2/1/99

Waste may be disposed of by a licensed waste disposal company. Contaminated absorbent material may be disposed of in an approved land fill. Follow local, state and federal disposal regulations.

### 12. TRANSPORT INFORMATION

UN HAZARD CLASS: N/A

### 13. REGULATORY INFORMATION

OSHA STATUS: This product is not hazardous under the criteria of the Federal OSHA hazard Communication Standard 29 CFR 1910.1200. However, thermal processing and decomposition fumes from this product may be hazardous as noted in Section 3.

TSCA STATUS: The components of this product are listed on TSCA.

CERCLA (Comprehensive Response Compensation, and Liability Act): Not reportable.

SARA TITLE III (Superfund Amendments and Reauthorization Act)

Section 312 Extremely Hazardous Substances: None

Section 311/312 Hazard Categories: Non-hazardous Under Section 311/312

Section 313 Toxic Chemicals: None

RCRA STATUS: If discarded in its purchased form, this product would not be a hazardous waste either by listing or by characteristic. However, under RCRA, it is the responsibility of the product user to determine at the time of disposal, whether a material containing the product or derived from the product should be classified as a hazardous waste. (40 CFR 261.20-24)

CALIFORNIA PROPOSITION 65: The following statement is made in order to comply with the California safe Drinking Water and Toxic Enforcement Act of 1986. The product contains no chemicals known to the State of California to cause cancer.

Material Safety Data Sheet

# Section 1 - Chemical Product / Company Information

Product Name: SS-HD PARTS WASHER FORMULATION Revision Date: 03/10/2004
Identification Number: 44991 Supercedes: 03/10/2004

Supplier: Solvent Systems International

70 King Street

Elk Grove Village, IL 60007

(847) 437-1100

# Section 2 - Composition / Information On Ingredients

| Chemical Name                 | CAS        | Weight %  | ACGIH TLV- | ACGIH TLV- | OSHA PEL- | OSHA PEL- |
|-------------------------------|------------|-----------|------------|------------|-----------|-----------|
|                               | Number     | Less Thar | TWA        | STEL       | TWA       | CEILING   |
| TETRAPOTASSIUM                | 7320-34-5  | 10.0      |            |            | 10 mg/m3  |           |
| PYROPHOSPHATE                 |            |           |            |            |           |           |
| HYDROTROPE                    | 1300-72-7  | 5.0       |            |            |           |           |

| SODIUM SULFATE                | 7757-82-6  | 0.1       |            |            |           |           |

### **Exposure Notes**

# Section 3 - Hazards Identification

\*\*\* Emergency Overview \*\*\*: No Information.

Effects Of Overexposure - Eye Contact: Can cause permanent injury to the eyes.

Effects Of Overexposure - Skin Contact: Prolonged or repeated contact can result in defatting and drying of the skin

which may result in skin irritation and dermatitis (rash). May be absorbed in toxic amounts through the skin.

Effects Of Overexposure - Inhalation: May be irritating to the respiratory system. Dust/Mist irritates nose and throat. Vapors can cause irritation of the respiratory tract. High concentrations can cause headache, nausea, weakness, lightheadedness, and stupor (CNS depression). High vapor concentrations may cause drowsiness and irritation.

Effects Of Overexposure - Ingestion: May cause dizziness and drowsiness and/or stupor. Ingestion may result in nausea, vomitting, diarrhea and restlesness. Corrosive and may cause severe and permanent damage to mouth, throat, and stomach. Irritating to mouth, throat, and stomach. Overexposure may cause nausea, diarrhea, and/or vomiting.

Effects Of Overexposure - Chronic Hazards: May cause delayed lung damage. Significant exposure to this chemical may adversely affect people with chronic disease of the respiratory system, central nervous system, kidney, liver, skin, and/or eyes. Overexposure may cause kidney damage.

Primary Route(s) Of Entry: N/A

# Section 4 - First Aid Measures

First Aid - Eye Contact: Flush eyes with water a minimum of 15 minutes occasionally lifting lower and upper lids. Get medical attention promptly.

First Aid - Skin Contact: Remove contaminated shoes and clothes and clean before reuse. Immediately flush skin with plenty of water. Remove clothing. Get medical attention immediately. Wash clothing separately before reuse.

First Aid - Inhalation: To prevent aspiration, keep head below knees. Remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get immediate medical attention.

First Aid - Ingestion: DO NOT induce vomiting. Get medical attention immediately. Do not induce vomiting. Do not give liquids. Obtain emergency medical attention.

# Section 5 - Fire Fighting Measures

Flash Point, F: N/A (TCC)

Lower Explosive Limit, %: N.D. Upper Explosive Limit, %: N.D.

Extinguishing Media: N/A

Unusual Fire And Explosion Hazards: May form expolsive peroxides.

Special Firefighting Procedures: Small fires: Dry chemical, carbon dioxide, water spray or alcohol-resistant foam. Large fires: Water spray, water fog, and alcohol-resistant foam. Water spray and foam must be applied carefully to avoid frothing As in any fire, wear self-contained breathing apparatus pressure-demand (MSHA/NIOSH approved or equivalent) and full protective gear. Water runoff can cause environmental damage. Dike and collect water used to fight fire. Water spray to cool containers or protect personnel. Use with caution.

# Section 6 - Accidental Release Measures

Steps To Be Taken If Material Is Released Or Spilled: Recover by pumping (use an explosion proof or hand pump). Eliminate all ignition sources. Flush spill area with water after clean up. Ventilate spill area. Take up spill with clean, dry shovel and place in chemical waste container. Do not touch or walk through spilled material. Flush spill area with water. Absorb spill with inert material (e.g. dry sand or earth), then place in a chemical waste container. Avoid runoff into storm sewers and ditches which lead to waterways.

# Section 7 - Handling And Storage

Handling: Potential peroxide former. After opening, purge container with nitrogen before reclosing. Ground and bond containers when transferring material. Follow all MSDS/label precautions even after containers are emptied because they may retain product residues. Use only in a well ventilated area.

Storage: Do not allow to evaporate to near dryness. Keep from freezing. Keep away from heat, sparks, and flame. Keep container closed when not in use. Store containers in a cool, well ventilated place.

# Section 8 - Exposure Controls / Personal Protection

Engineering Controls: Local exhaust ventilation may be necessary to control any air contaminants to within their TLVs during the use of this product.

Respiratory Protection: NIOSH/MSHA approved respirators may be necessary if airborne concentrations are expected to exceed exposure limits. A NIOSH/MSHA approved air purifying respirator with an organic vapor cartridge or canister may be permissible under certain circumstances where airborne concentrations are expected to exceed exposure limits.

Skin Protection: Wear long sleeves when contact is likely to occur. Wear impervious gloves to prevent contact with the skin. Wear protective gear as needed - apron, suit, boots.

Eye Protection: Do not wear contact lenses. Wear safety glasses with side shields (or goggles) and a face shield. Use chemical splash goggles and face shield (ANSI Z87.1 or approved equivalent).

Other protective equipment: Facilities storing or utilizing this material should be equipped with an eyewash facility and a safety shower.

Hygienic Practices: Wash thoroughly after handling. Do not eat, drink, or smoke in areas where this material is used.

# Section 9 - Physical And Chemical Properties

Boiling Range: N.D. - N.D. Vapor Density: N.D. Odor: MILD Odor Threshold: N.D. Appearance: clear liquid Evaporation Rate: N.D.

Solubility in H2O: 100%

Freeze Point: 32 degrees F Specific Gravity:

Vapor Pressure: N.D. PH: 11.5
Physical State: liquid Viscosity: N.D. RVOC: 25 g/L

(See section 16 for abbreviation legend)

# Section 10 - Stability And Reactivity

Conditions To Avoid: Avoid impact, friction, heat, sparks or flame.

Incompatibility: Prevent contact with strong oxidizing agents. Do not use sodium nitrite or other nitrosating agents in formulations containing thos product. Suspected cancer-causing nitrosamines could be formed. Avoid contact with metals. Do not store in aluminum or aluminum alloy containers. Avoid contact with moisture and/or water. Keep away from acids.

Hazardous Decomposition: Decomposition under fire conditions can lead to the formation of oxides of phosphorus. Combustion can lead to the formation of ammonia. Decomposition causes sulfur oxides to be released. Decomposition

releases nitrogen oxides. During combustion carbon dioxide may be formed. During combustion carbon monoxide may be formed. Toxic gases/fumes are given off during burning or thermal decomposition.

Hazardous Polymerization: No Information.

Stability: No Information.

# Section 12 - Ecological Information

Ecological Information: No Information.

# Section 13 - Disposal Information

Disposal Information: Dispose of waste in accordance with all local, state and federal regulations.

For assistance with your waste management needs, contact Solvent Systems International at (847) 437-1100

# Section 14 - Transportation Information

Non-regulated cleaning material.

# Section 15 - Regulatory Information

**CERCLA – SARA Hazard Category** 

This product has been reviewed according to the EPA 'Hazard Categories' promulgated under Sections 311 and 312 of the Superfund Amendment and Reauthorization Act of 1986 (SARA Title III) and is considered, under applicable definitions, to meet the following categories:

IMMEDIATE HEALTH HAZARD, CHRONIC HEALTH HAZARD, FIRE HAZARD

#### SARA Section 313:

This product contains the following substances subject to the reporting requirements of Section 313 of Title III of the Superfund Amendment and Reauthorization Act of 1986 and 40 CFR part 372:

**Chemical Name** 

2-BUTOXYETHANOL, GLYCOL ETHERS; 2-BUTOXYETHANOL, 1,2-ETHANEDIOL, 1-BUTANOL

**CAS Number** 

111-76-2

**Toxic Substances Control Act:** 

All components of this product are listed or are exempt from listing on the TSCA 8(b) inventory. If identified components o this product are listed under the TSCA 12(b) export notification rule, they will be listed below:

**Chemical Name** SODIUM CARBONATE SODIUM SULFATE

**CAS Number** 497-19-8

7757-82-6

U.S. State Regulations: As follows -

New Jersey Right-to-Know:

The following materials are non-hazardous, but are among the top five components in this product.

**Chemical Name** DEIONIZED WATER, BULK

**CAS Number** 7732-18-5

Pennsylvania Right-to-Know:

The following non-hazardous ingredients are present in the product at greater than 3%.

**Chemical Name** DEIONIZED WATER, BULK **CAS Number** 7732-18-5

California Proposition 65:

Warning: The following ingredients present in the product are known to the state of California to cause Cancer:

**Chemical Name** 

CAS

Number ALCOHOLS, C10-C12, ETHOXYLATED, PROPOXYLATED

68154-97-2

Warning: The following ingredients present in the product are known to the state of California to cause birth defects, or other reproductive hazards.

**Chemical Name** ALCOHOLS, C10-C12, ETHOXYLATED, PROPOXYLATED

**CAS Number** 68154-97-2

International Regulations: As follows -

#### **CANADIAN WHMIS:**

This MSDS has been prepared in compliance with Controlled Product Regulations except for the use of the 16 headings.

### **CANADIAN WHMIS CLASS:**

# Section 16 - Other Information

**HMIS Ratings:** 

Health: 1 Flammability: 0 Reactivity: 0 Personal Protection:

RVOC: 25 g/L

### **REASON FOR REVISION:**

Legend: N.A. - Not Applicable, N.E. - Not Established, N.D. - Not Determined

The information on this MSDS was obtained from sources which we believe to be reliable. However, the information is provided without any warranty, expressed o implied, regarding its correctness. Some information presented and conclusions drawn herein are from sources other that direct test data on the product itself. The conditions or methods of handling, storage, use and disposal of the product are beyond our control and may be beyond our knowledge. For these reasons, we do not assume responsibility and expressly disclaim any liability for loss, damage, or expense arising out of or in any way connected with handling, storage, use, or disposal of this product. If the product is used as a component in another product, this MSDS may not be applicable. It is the responsibility of the user to comply wi all Federal, State, and Local laws and regulations.

# SECTION III HAZARDS IDENTIFICATION

**UN Number: Not Required** 

**Dangerous Goods Classification: Non Hazardous** 

# **HAZARD RATINGS (NFPA/HMIS)**

HEALTH 1 0 = least

1 = slight

FLAMMABILITY 0 2 = moderate

3 = high

REACTIVITY 0 4 = extreme.

# SECTION IV PHYSICAL / CHEMICAL CHARACTERISTICS

PHYSICAL STATE: Liquid SOLUBILITY IN WATER: Infinite BOILING POINT: 210° F/99° C PH: 9.0

APPEARANCE AND ODOR: Clear, low odor fluid

SPECIFIC GRAVITY: 1.0036

VOC Content: 10 g/L

VOC composite partial pressure: < 1 mm Hg

**METHOD USED: Open cup** 

# SECTION V FIRST AID MEASURES

#### **EMERGENCY & FIRST AID PROCEDURES:**

EYES: It is unlikely that emergency treatment will be required; if adverse effects occur, rinse eyes with large amounts of water until no evidence of chemical remains. Seek medical attention if necessary.

SKIN: It is unlikely that emergency treatment will be required; if adverse effects occur, rinse affected area with large amounts of water until no evidence of chemical remains. Seek medical attention if necessary.

INGESTION: It is unlikely that emergency treatment will be required; if adverse effects occur, treat symptomatically and seek medical attention if necessary.

INHALATION: It is unlikely that emergency treatment will be required; if adverse effects occur, remove to fresh air and observe. Seek medical attention if necessary.

# SECTION VI FIRE & EXPLOSION HAZARD DATA

FLAMMABILITY: None MEANS OF EXTINCTION: N/A FLASH POINT: None > 200 F

FLAMMABLE LIMITS: UPPER: None LOWER: None

SPECIAL FIRE FIGHTING PROCEDURES: None USUAL FIRE & EXPLOSION HAZARDS: None

# SECTION VII ACCIDENTAL RELEASE MEASURES

In the event that this material is released or spilled, it can be washed into storm sewer with large quantities of water.

# SECTION VIII HANDLING, STORAGE & TRANSPORT INFORMATION

No special precautions are required. This product is not hazardous for storage and transport according to the U.S. Department of Transportation Regulations.

# SECTION IX EXPOSURE CONTROLS

Exposure Limits: This product presents no health hazards to the user when used according to label directions for its intended purposes.

VENTILATION (Local exhaust): Not required.

# SECTION X PERSONAL PROTECTION

RESPIRATORY PROTECTION (Specify Type): Not required.

PROTECTIVE GLOVES: It is recommended that rubber gloves be worn

when handling any industrial-use products.

EYE PROTECTION: It is recommended that safety glasses be worn

when handling any industrial-use products.

OTHER / HYGIENIC PRACTICES: Always use good housekeeping procedures

when using any chemical product.

Product Name: OzzyJuice® SW-8 Aircraft & Weapons Degreasing Solution

PAGE 3 OF 3

# SECTION XI STABILITY AND REACTIVITY DATA

REACTIVITY: Non reactive STABILITY: Stable

**HAZARDOUS POLYMERIZATION: Will not occur** 

# SECTION XII TOXICOLOGICAL PROPERTIES

**ROUTES OF ENTRY: Skin, Eyes** 

EFFECTS OF ACUTE EXPOSURE: It is unlikely that exposure will require treatment because product is considered a dermal non-

irritant and a mild ocular irritant.

**HEALTH HAZARDS (Acute & Chronic): None** 

CARCINOGENICITY: None Known TETRATOGENICITY: None known

# SECTION XIII BIODEGRADABILITY AND ENVIRONMENTAL TOXICITY INFORMATION

BIODEGRADABILITY: Biodegradable

**TOXICITY INFORMATION:** 

48 hours LC50 value in mg/L

Ceriodaphnia dubia 141.0 mg/L Fathead Minnows 171.36 mg/L

# SECTION XIV DISPOSAL CONSIDERATIONS

WASTE DISPOSAL: This product is a water soluble and biodegradable fluid that will not harm sewage-treatment organisms if disposal by sewer or drain is necessary. Dispose of in accordance with Local, State and Federal regulations.

# SECTION XV ADDITIONAL INFORMATION

Prepared by: Onofre Ortiz Date: February 6, 2003

# APPENDIX C INTERVIEW QUESTIONNAIRES

# Interview Outline for Alternative Parts Washer Guide (In-Brief)

# **General Information:**

# (Attain from personnel being interviewed)

- 1. Name and contact information (Phone or E-Mail).
- 2. Job title.
- 3. Shop name.

# (Attain from shop owner only)

- 4. Number of personnel working in the shop.
- 5. Number of personnel that have be using the demonstrated cleaner / parts washer.
- 6. Type (product detail) of parts washers used currently.

# (Center POC to fill this in)

7. Type (product detail) parts washer (or cleaner) being reviewed.

| In Depth Questions   |
|--|
| <u>Use:</u> What are the primary uses for parts washers in this shop?  |
| What parts are typically cleaned?  |
| What is the material being cleaned (metal, plastic, combination)?  |
| What contaminants are being removed?   |
|  |
| Process:   |
| Is your current Parts Washer a part/portion of a larger cleaning process?  |
| If so, where do parts come from to be cleaned? (Previous steps)  |
| Where do parts go from here? (Future steps)  |
| Describe in detail the cleaning process used with this parts washer / cleaner.   |
|  |
| Describe how this trial parts washer process differs from the process used with your current parts washer / cleaner. Describe the currently used process if necessary. |

# **Overall Performance:**

How well, in your opinion does *[insert currently used product name]* parts washer (or cleaner) work?

In comparison to other parts washers you have used, how well does this parts washer (or cleaner) perform?

How long does it take to clean parts using *[insert currently used product name]* parts washer (or cleaner)?

# **Physical Characteristics:**

Are there any noticeable odors from your current cleaner?

Are there any physical qualities (color, texture, etc.) of your current cleaner that discourage some in the shop from using it?

Are there any other physical qualities (color, texture, etc.) of your current cleaner that would encourage use?

Is there any noticeable loss of cleaning fluid due to evaporation when using parts washers currently in use?

# **Maintenance:**

How is maintenance performed for the parts washing unit / cleaner currently in use, and with what frequency? Please describe the general maintenance process.

# **Specific Performance:**

How many parts do you clean with your current Part Washer?

Are there any compatibility issues with your current Part Washer?

Does your current Part Washer clean some contaminants better than others do? If so, which?

Are there any contaminants that your current Part Washer is unable to clean?

Does the currently used Part Washer discolor any parts being cleaned?

Does the currently used cleaner leave an undesirable residue on the cleaned parts?

Are there any corrosion issues with your current cleaner (adequate/inadequate protection if desired)?

Are there any compatibility issues with your cleaner (i.e. Seals, plastics or other non metallic parts)?

# **User Opinion:**

Would you suggest an alternative cleaner to replace the currently used cleaner if it is significantly better for the environment and safer for workers to use but does not clean any better than your current one?

Would you suggest an alternative cleaner to replace the currently used cleaner if it is significantly better for the environment and safer for workers to use but it takes slightly longer to clean with than your current one?

# **Closure:**

Do you have suggestions concerning this project / effort that would help or improve the process when reviewing new / alternative parts washers?

Are there any other comments or questions that you may have for us?

# **In Depth Questions**

| (Determine if there have been any changes  |
|--|
| in the following information since the In-Brief) Use:  |
| What are the primary uses for parts washers in this shop?  |
| What parts are typically cleaned?  |
| What is the material being cleaned (metal, plastic, combination)?  |
| What contaminants are being removed?   |
| Process:   |
| Is your current Parts Washer a part/portion of a larger cleaning process?  |
| If so, where do parts come from to be cleaned? (Previous steps)  |
| Where do parts go from here? (Future steps)  |
| Describe in detail the cleaning process used with this parts washer / cleaner.   |
|  |
| Describe how this trial parts washer process differs from the process used with your current parts washer / cleaner. Describe the currently used process if necessary. |

# (New Questions on Test Part Washer) Overall Performance:

How well, in your opinion does *[insert test product name]* parts washer (or cleaner) work?

In comparison to other parts washers you have used, how well does *[insert test product name]* parts washer (or cleaner) perform?

How long does it take to clean parts using *[insert test product name]* parts washer (or cleaner)?

# **Physical Characteristics:**

Are there any noticeable odors from the *[insert test product name]* cleaner? If so, is it an acceptable odor?

Are there any other physical qualities (color, texture, etc.) of the *[insert test product name]* cleaner that would discourage use?

Are there any other physical qualities (color, texture, etc.) of the *[insert test product name]* cleaner that would encourage use?

Is there any noticeable loss of *[insert test product name]* cleaning fluid due to evaporation when compared to parts washers currently in use?

# (New Questions Covering Test Part Washer) <a href="Maintenance:">Maintenance:</a>

| How is maintenance performed for the <i>[insert test product name]</i> parts washing unit / cleaner, and with what frequency? |
|---|
| How does this maintenance compare to that of other parts washers you have used?   |
| How does this maintenance schedule compare to that of the parts washers currently in use?                                     |
| Specific Performance:  How many parts did you clean in the test unit / with this test cleaner?                                |
| Were there any compatibility issues with this test cleaner?   |
| Does this test cleaner clean some contaminants better than others do? If so, which?   |
| Are there any contaminants that this test cleaner was unable to clean?  |
|   |

# (New Questions Covering Test Part Washer) User Opinion:

Would you suggest this cleaner as an alternative to the cleaner currently used based on its performance?

Would you suggest this cleaner as an alternative to the currently used cleaner if it is significantly better for the environment and/or safer for workers to use?

# **Pros and Cons:**

List some benefits of using this parts washer (or cleaner) compared to the one currently in use.

List some drawbacks of using this parts washer (or cleaner) compared to the one currently in use.

# **Closure:**

Do you have suggestions concerning this project / effort that would help or improve the process when reviewing new / alternative parts washers?

Are there any other comments or questions that you may have for us?

# **Out-Brief Interview Outline for Alternative Parts Washer Guide**

Note: The focus of the interview and questions is on the cleaners. If shop owners or workers are not happy with the equipment on loan to them, please note it but do not factor that into a decision of the quality of the cleaning fluids.

# **General Information:**

| Confirm from Previous In-Brief Interview)  |
|--|
| 1. Name and contact information (Phone or E-Mail).                                       |
| 2. Shop name.  |
| 3. Number of personnel working in the shop.  |
| 4. Number of personnel that have used the demonstrated cleaner / parts washer.           |
| 5. Type (product detail) of parts washers used currently.                                |
| 6. Type (product detail) parts washer (or cleaner) being reviewed.                       |
| <b>NEW-</b> 7. Number of parts cleaned during 30-day test cycle. (Estimate if necessary) |

# **In Depth Questions**

| (Determine if there have been any changes in the following information since the In-Brief) <u>Use:</u> What are the primary uses for parts washers in this shop?       |
|--|
| What parts are typically cleaned?  |
| What is the material being cleaned (metal, plastic, combination)?  |
| What contaminants are being removed?   |
| Process:   |
| Is your current Parts Washer a part/portion of a larger cleaning process?  |
| If so, where do parts come from to be cleaned? (Previous steps)  |
| Where do parts go from here? (Future steps)  |
| Describe in detail the cleaning process used with this parts washer / cleaner.   |
| Describe how this trial parts washer process differs from the process used with your current parts washer / cleaner. Describe the currently used process if necessary. |

# (New Questions on Test Part Washer) Overall Performance:

How well, in your opinion did [insert test product name] parts washer (or cleaner) work?

In comparison to other parts washers you have used, how well did *[insert test product name]* parts washer (or cleaner) perform?

How long does it take to clean parts using *[insert test product name]* parts washer (or cleaner)?

### **Physical Characteristics:**

Are there any noticeable odors from the *[insert test product name]* cleaner? If so, is it an acceptable odor?

Are there any other physical qualities (color, texture, etc.) of the *[insert test product name]* cleaner that would discourage use?

Are there any other physical qualities (color, texture, etc.) of the *[insert test product name]* cleaner that would encourage use?

Was there any noticeable loss of *[insert test product name]* cleaning fluid due to evaporation when compared to parts washers currently in use?

# (New Questions Covering Test Part Washer) Maintenance:

| <u>Maintenance:</u>   |
|---|
| What type of maintenance was performed for the <i>[insert test product name]</i> parts washing unit / cleaner, and with what frequency? |
| How did this maintenance compare to that of other parts washers you have used?  |
| How does the maintenance schedule of the test washer compare to that of the parts washers currently in use?                             |
| Specific Performance:   |
| How many parts did you clean in the test unit / with this test cleaner?   |
| <b>NEW -</b> Name Specific Parts Cleaned and Correlate with Photographs if possible:  |
| Were there any compatibility issues with this test cleaner?   |
| Did this test cleaner clean some contaminants better than others do? If so, which?  |
| Are there any contaminants that this test cleaner was unable to clean?  |

# (New Questions Covering Test Part Washer) User Opinion:

Would you suggest this cleaner as an alternative to the cleaner currently used based on its performance?

Would you suggest this cleaner as an alternative to the currently used cleaner if it is significantly better for the environment and/or safer for workers to use?

### **Pros and Cons:**

**UPDATED** - Having completed one month of use, list some benefits of using this parts washer (or cleaner) compared to the one currently in use.

**UPDATED** - Having completed one month of use, list some drawbacks of using this parts washer (or cleaner) compared to the one currently in use.

### **Closure:**

Would you like to keep the test parts washer on-site permanently if possible considering cost?

**NEW -** If the test equipment is not satisfactory, but the cleaning materials were, please note this here and describe how in what ways it was not satisfactory:

Do you have suggestions concerning this project / effort that would help or improve the process when reviewing new / alternative parts washers?

Are there any other comments or questions that you may have for us?

# **Executive Summary**

In 1998, National Aeronautics and Space Administration (NASA) Headquarters (HQ) and Kennedy Space Center (KSC) established the NASA Acquisition Pollution Prevention (AP2) Program Office. This office is responsible for identifying pollution prevention (P2) needs and validating environmental technology solutions across enterprises and centers for application to affected systems. The NASA AP2 Program is responsible for intra-agency environmental technology migration among NASA centers and enterprises. It is also responsible for identifying, qualifying, and implementing common alternatives for reduction or replacement of HAZMATs used by NASA Enterprise Programs and Center Process Owners.

The NASA AP2 Office (NASA) requested the National Center for Remanufacturing and Resource Recovery (NC3R) to assist them in conducting cleaning efficiency tests as described in Section 4.5.8 of military specification MIL-PRF-29602A for a parts washer evaluation project. NASA wishes to evaluate the efficacy of several cleaning chemistries being considered for use by this agency. The efficiencies of these cleaning chemistries were evaluated on standard test coupons that were contaminated with two standardized materials. The cleaning efficiency of each cleaning chemistry was determined for each contaminant.

The average cleaning efficiency of a cleaning chemistry is determined by adding the average cleaning efficiencies for Contaminants #1 and #2 and dividing by two. Cleaning chemistries are then ranked from best to worst based on average cleaning efficiency.

Due to inaccuracies in linearity of the analytical balance, reported cleaning efficiencies are accurate to +/- 0.32%. Based on this tolerance level, three cleaning chemistries have potential average cleaning efficiencies of 100% - Heavy Duty Cleaner, SoySolv II Plus, and Mineral Spirits. Eight more cleaning chemistries reported average cleaning efficiencies in excess of 99% - they are Optima 2001 CR, SoySolv II, Aerowash 4, California Parts Washer Solution, Enviroclear, Aquaworks MPC Concentrate, Breakthrough, and Armakleen M-Aero.

A ranked list of all cleaning chemistries evaluated in this project appears on the next page. Cleaning chemistries highlighted in yellow are those that do not appear in NASA's original test matrix provided to NC3R, but were suggested by NC3R for consideration by NASA.

NASA - 1 - 5/24/2005

# **Equipment Used**

The equipment to be used for this project was clearly specified in Section 4.5.8 of military specification MIL-PRF-29602A, which is attached as Appendix A. All equipment purchased or leased for this project complied with MIL-PRF-29602A with the single exception of the mechanical grease worker, which was needed to create a synthetic contaminant composed of molybdenum disulfide grease and carbon black. Due to the high cost of this equipment, NASA AP2 agreed to substitute a high shear mixer for the mechanical grease worker, as indicated in the proposal accepted by NASA AP2. Because the high shear mixture could be leased, this substantially reduced the cost of the project with no apparent loss of accuracy.

Details, images, and specifications of equipment used in this project are presented below.

# **Charles Ross & Son Company**

HSM- 100 LSK High Shear Mixer

• Motor Power 1 HP

• Speed Range 0 − 10,000 RPM

### **Denver Instruments**

APX – 100 Chamber

• Weight Range 100g

• Readability 0.1mg

• Linearity  $\pm 0.2$ mg

#### mester motificite of feetimologic

### **Barnstead International**

Super-Nuova Stirring Hot Plate Series 1318

• Temperature Range 1 − 370°C

• Temperature Stability  $\pm 0.5$ °C

● Speed Range 50 – 1,200 RPM

• Speed Stability  $\pm 1.5\%$ 

# **Fisher Scientific**

Isotemp Programmable Oven 800 Series

• Temperature Range 50 – 325°C

• Average Uniformity  $\pm 2^{\circ}$ C

• Resolution 1 °C

# NC3R Operating Procedure

In this section of the report, the operating procedures used for preparation, testing, and determination of cleaning efficiency are reviewed.

### Prepare Test Coupons, Synthetic Hard Water, and Synthetic Contaminants

48 test coupons with dimensions 1" wide x 4" long x ¼" thick were manufactured from 6061 aluminum alloy in Rochester Institute of Technology's (RIT's) Brinkman CNC laboratory. Each coupon had a 1/16" depression in the center with dimensions as specified in MIL-PRF-29602A, part 4.5.8.3. Each test coupon was engraved with an ID number to facilitate quick identification, as shown below. Each test coupon weighed approximately 40 grams.

**Test Coupons** 

NC3R prepared a quantity of synthetic hard water stock solution sufficient to support analysis of all cleaning chemistries evaluated in this project. The synthetic hard water was created from distilled water, reagent grade calcium acetate monohydrate, and reagent grade magnesium sulfate heptahydrate in accordance with MIL-PRF-29602A, part 4.5.5.1.

Two synthetic soil contaminants were created. The first soil contaminant (Contaminant #1) was composed of 10 parts MIL-G-21664 Aeroshell 17 molybdenum disulfide grease mixed with 1 part Raven 1040 carbon black in a high speed disperser. As mentioned previously, a high speed disperser was used to mix these components instead of the mechanical grease worker specified in MIL-PRF-29602A, part 4.5.8.1. Note also that MIL-C-29602 (the predecessor to MIL-PRF-29602A) called for the use of a high speed disperser to mix similar components (see Part 4.6.6.1.1). The resulting mixture was a jet black, viscous mixture.

The second soil contaminant (Contaminant #2) consisted of Alox 2028S, manufactured by Lubrizol Corporation, which acquired Alox Corporation. It should be noted that MIL-PRF-29602A calls for the use of Alox 2028, which is no longer manufactured, having

NASA - 5 - 5/24/2005

been replaced with Alox 2028S. Alox 2028S was used instead of Alox 2028 with prior approval from NASA.

# **Selection of Cleaning Chemistries**

After reviewing the list of cleaning chemistries provided by NASA, NC3R noted that certain mil spec-approved cleaning chemistries – as well as other cleaning chemistries of interest - were not on this list. After discussing this with NASA, NC3R agreed to evaluate these additional chemistries at no additional charge to NASA. In addition, some chemistries were tested under more than one operating condition, e.g. at a different temperature and concentration, as requested by the vendor. In some cases, this resulted in a significant change in cleaning efficiency. As a result, a total of 57 cleaning trials (not 36) were conducted for this project.

# Conduct Cleaning Efficiency Testing per MIL-PRF-29602A, part 4.5.8

NC3R determined the cleaning efficiency of all cleaning chemistries evaluated in this project using the procedure described in MIL-PRF-29602A, part 4.5.8. Test coupons were precleaned with acetone using wipers in accordance with CCC-C-46, class 7, until the wipe was free of visual residue. Precleaned test coupons were dried in a mechanical convection oven at  $105 \pm 2^{\circ}$ C for 30 minutes, air cooled to room temperature, and weighed to the nearest 0.1 mg (W<sub>1</sub>). Three precleaned test coupons were then loaded with 100-150 mg of Contaminant #1 using a clean acid brush as shown below. The coupons were reweighed to the nearest 0.1 mg (W<sub>2</sub>) and the new weight recorded.

### **Coupons Loaded with Contaminant #1**

500 mls of the cleaning solution in the proper concentration to be evaluated were added to a heavy duty glass beaker. It should be noted that cleaning chemistries are diluted to a wide variety of concentrations – some cleaning chemistries are run full strength, while others are diluted to 3% or less by volume. In all cases, the concentration that was established was that recommended by the vendor. After the solution was created, it was stabilized at the manufacturer's recommended operating temperature using a digital stirrer/hot plate. Unless otherwise noted, the chemistry was heated to  $71 \pm 1^{\circ}$ C. Some

NASA - 6 - 5/24/2005

### ROCHESTER INSTITUTE OF TECHNOLOGY

cleaning chemistries will degrade if heated to this temperature, so the lesser of 71 °C and the maximum recommended temperature for each chemistry was used. The three test coupons loaded with Contaminant #1 were then clamped to the inside of the beaker and the solution stirred with a 2" x 3/8" magnetic stirring bar at 500 RPM for 10 minutes as shown below.

**Cleaning of Test Coupons with Digital Stirrer/Hot Plate** 

The cleaned test coupons were then rinsed under a 4 liter/minute water stream from a laboratory faucet with serrated tip and dried in a mechanical convection oven at  $105 \pm 2^{\circ}$ C for 5 minutes. The cleaned and dried test coupons were allowed to cool to room temperature and reweighed to the nearest 0.1 mg (W<sub>3</sub>) so that the extent of contaminant removal could be determined.

Following this test, three additional precleaned test coupons (which had been precleaned using the same procedure as those for Contaminant #1) were loaded with 100-150 mg of Contaminant #2 using a clean acid brush, dried for one hour in a mechanical convection oven at 105°C, air cooled, and weighed to the nearest 0.1 mg (W<sub>2</sub>). A photograph of test coupons loaded with Contaminant #2 is shown below.

**Coupons Loaded with Contaminant #2** 

NASA -7 - 5/24/2005

### ROCHESTER INSTITUTE OF TECHNOLOGY

These loaded test coupons were cleaned in the same manner as Contaminant #1, using the same (dirty) solution that was used to clean the test coupons containing Contaminant #1. Cleaned test coupons were then rinsed under flowing cold tap water for 1 minute without impinging on the soiled area. Test coupons were then dried for 5 minutes in a mechanical convection oven at  $105 \pm 2^{\circ}$ C for 5 minutes, air cooled, and weighed to the nearest 0.1 mg (W<sub>3</sub>). The above process was repeated for all cleaning chemistries evaluated in this project over a period of 3 weeks.

# **Determination of Cleaning Efficiency**

The cleaning efficiency was calculated for each test coupon evaluated in the procedure described above using the equation provided in MIL-PRF-29602A, part 4.5.8.6. The overall cleaning efficiency for each of the 57 specific cleaning trials for each of the two contaminants was calculated as the arithmetic mean of the three cleaning efficiencies calculated for those respective test coupons (refer to equation below).

Cleaning Efficiency = 
$$\frac{(W_2 - W_3)}{(W_2 - W_1)} \times 100$$

NASA - 8 - 5/24/2005

# **Results of Cleaning Efficiency Testing**

In this section of the report, the results of cleaning efficiency testing are reviewed.

### **Revision of Test Results**

It should be noted that significant variation was noted in  $W_1$  (the weight of the precleaned test coupon) throughout cleaning efficiency testing. This is explained in detail below.

Mil spec MIL-PRF-29602A stipulates that prior to testing, the test coupon is to be precleaned with acetone and clean room wipes until no further contamination is visible on the wipes. This precleaning process is inadequate to remove residual contamination from test coupons, in particular Contaminant #2, which is transparent. In addition, many of the cleaning chemistries evaluated in this project are superior to acetone. For example, the 12 best cleaning trials resulted in cleaning efficiencies in excess of 99%, whereas the average cleaning efficiency of acetone itself is less than 66%.

It should be noted that NC3R used a more aggressive test coupon precleaning procedure than that delineated in the mil spec, as NC3R noted early on that it was difficult to preclean test coupons adequately with acetone. In fact, an ultrasonic tank was used to preclean test coupons in addition to the mandated acetone/wiper procedure. However, in some cases, test coupons were still not precleaned completely. As a result, the precleaned test coupon weight still included transparent contamination in some cases.

This irregularity produced some unusual test results. If a test coupon had residual transparent contamination following the precleaning procedure, its measured clean bare mass  $(W_1)$  was heavier than its actual clean bare mass. If this same test coupon was loaded with a contaminant and cleaned in a superior cleaning chemistry, this chemistry not only removed all of the loaded contaminant, but the residual contamination on the precleaned test coupon prior to the start of the test as well. As a result, some cleaning efficiencies were greater than 100%, above and beyond what could be explained by inaccuracies of linearity in the analytical balance.

Fortunately, this problem was easily remedied. Following completion of all cleaning efficiency testing, all test coupons were thoroughly cleaned for one last time in a multistep cleaning process that involved multiple cleaning steps in an ultrasonic tank, as well as manual wiping with solvents and clean room wipers. These test coupons were then dried in a mechanical convection oven, allowed to cool, and weighed. For all 48 test coupons, the final mass was within 0.1 mg of the smallest precleaned mass ever recorded for that respective test coupon during any cleaning trial (it should be noted that inaccuracies of linearity in the analytical balance are twice this amount). This showed that the cleaning chemistries evaluated in this project (except for Test #8, explained below) did not attack the aluminum substrate of the test coupons, so the clean bare test coupon mass was constant throughout testing. Cleaning efficiencies were then recalculated using this mass as the precleaned test coupon weight W<sub>1</sub>. After this

NASA - 9 - 5/24/2005

### ROCHESTER INSTITUTE OF TECHNOLOGY

correction was made, all cleaning efficiencies (except for Test #8) were less than 100%, taking into account inaccuracies in linearity of the analytical balance.

The original test data is presented in Appendix B, with average cleaning efficiencies for each contaminant calculated for each trial. This data utilizes the actual precleaned test coupon weight at the start of each trial for  $W_1$ , which may have included residual contamination from previous cleaning trials. As a result, several calculated cleaning efficiencies exceed 100%, as explained previously.

The revised test data is presented in Appendix C. In the revised test data, the weight of the test coupon after a thorough final cleaning is used for  $W_1$  for all cleaning trials. As a result, all cleaning efficiencies (except Test #8) are less than 100%, taking into account inaccuracies in linearity of the analytical balance.

A detailed case study of this phenomenon is presented in Appendix D, and highlights the differences in the measured precleaned mass of a specific test coupon throughout its use in this project. The average cleaning efficiency of the tests using this particular test coupon are calculated using both methods described above and compared.

### **Other Irregularities**

Cleansafe 7448-05 is the cleaning chemistry that was used for Test #8. Initially, this cleaning chemistry generated cleaning efficiencies of 269% and 176% for Contaminants #1 and #2, respectively. However, significant discoloration was immediately noted on the test coupons. After additional analysis, it was determined that this cleaning chemistry attacked the aluminum substrate of the test coupon. Additional review of the MSDS revealed that this compound is not aluminum safe. As a result, the excess cleaning efficiencies can be wholly attributed to aluminum degradation of the test coupon itself, and therefore must be discarded.

It should be noted that the six test coupons used for Test #8 (test coupons #22 - #27) underwent a change in clean bare mass as a result of aluminum degradation. Therefore, for the revised test data appearing in Appendix C, these test coupons have two different precleaned weights – one used for Tests #1 - #8, and another used for Tests #9 - #57. The precleaned weight used for Tests #1 - #8 is the weight of the test coupon before the very first cleaning test. The precleaned weight used for Tests #9 - #57 is the final weight of the respective test coupon after the very thorough final cleaning procedure conducted after all cleaning efficiency testing had been completed.

Neugenic 4177 is the cleaning chemistry that was used for Test #45, and was used full strength. The test results for this cleaning chemistry showed a negative cleaning efficiency for Contaminant #2, implying that the test coupons had gained contaminant mass during the cleaning process. In actuality, Neugenic 4177 is very thick and is composed of 20% surfactants. These surfactants were not completely rinsed away by the less aggressive rinsing procedure mandated for Contaminant #2. As a result, the test coupons contained both residual contamination and cleaning chemistry, and therefore had

NASA - 10 - 5/24/2005

more mass at the end of the cleaning test for Contaminant #2. This resulted in a negative cleaning efficiency.

### **Presentation of Cleaning Efficiency Test Results**

The results of cleaning efficiency testing for each contaminant, for each of 57 tests, are shown on the next page. The average cleaning efficiency of a cleaning chemistry is determined by adding the average cleaning efficiencies for Contaminants #1 and #2 and dividing by two. Cleaning chemistries are then ranked from best to worst based on average cleaning efficiency.

Due to inaccuracies in linearity of the analytical balance, reported cleaning efficiencies are accurate to +/- 0.32%. Based on this tolerance level, three cleaning chemistries have potential average cleaning efficiencies of 100% - Heavy Duty Cleaner, SoySolv II Plus, and Mineral Spirits. Eight more cleaning chemistries reported average cleaning efficiencies in excess of 99% - they are Optima 2001 CR, SoySolv II, Aerowash 4, California Parts Washer Solution, Enviroclear, Aquaworks MPC Concentrate, Breakthrough, and Armakleen M-Aero.

A ranked list of all cleaning chemistries evaluated in this project appears on the next page. For convenience, the supplier, flash point, pH of concentrate, and VOC content of each cleaning chemistry is also provided. Cleaning chemistries highlighted in yellow are those that do not appear in NASA's original test matrix provided to NC3R, but were suggested by NC3R for consideration by NASA. Contact information for the manufacturers of these chemistries is provided in Appendix E.

# PERFORMANCE SPECIFICATION

# CLEANING COMPOUNDS, PARTS WASHER AND SPRAY CABINET

This specification is approved for use by all Departments and Agencies of the Department of Defense.

### 1. SCOPE

- 1.1 Scope. This specification covers two types of cleaning compounds used in parts washers and spray cabinets for cleaning aircraft components.
- 1.2 <u>Classification</u>. The cleaning compounds covered by this specification are classified as follows:

Type I - Water-soluble liquid concentrate

Type II - Water-soluble powder

### 2. APPLICABLE DOCUMENTS

2.1 General. The documents listed in this section are specified in sections 3 and 4 of this specification. This section does not include documents cited in other sections of this specification or recommended for additional information or as examples. While every effort has been made to ensure the completeness of this list, document users are cautioned that they must meet all specified requirements of documents cited in sections 3 and 4 of this specification, whether or not they are listed.

Comments, suggestions, or questions on this document should be addressed to: Commander, Naval Air Warfare Center Aircraft Division, Code 414100B120-3, Highway 547, Lakehurst, NJ 08733-5100 or emailed to thomas.omara@navy.mil. Since contact information can change, you may want to verify the currency of this address information using the ASSIST Online database at www.dodssp.daps.mil.

AMSC N/A

FSC 6850

### 2.2 Government documents.

2.2.1 <u>Specifications and standards</u>. The following specifications and standards form a part of this document to the extent specified herein. Unless otherwise specified, the issues of these documents are those cited in the solicitation or contract.

### FEDERAL SPECIFICATIONS

CCC-C-46 - Cloth, Cleaning, Nonwoven Fabric. (Inactive for new design)

### DEPARTMENT OF DEFENSE SPECIFICATIONS

MIL-PRF-680 - Degreasing Solvent

MIL-A-8625 - Anodic Coatings for Aluminum and Aluminum Alloys

MIL-G-21164 - Grease, Molybdenum Disulfide, for Low and High

Temperatures, NATO Code Number G-353

MIL-PRF-83282 - Hydraulic Fluid, Fire Resistant, Synthetic Hydrocarbon Base,

Aircraft, Metric, NATO Code Number H-537

MIL-DTL-83488 - Coating, Aluminum, High Purity

(Copies of these documents are available on line at <a href="http://assist.daps.dla.mil/quicksearch/">http://assist.daps.dla.mil/quicksearch/</a> or <a href="http://assist.daps.dla.mil/quicksearch/">www.dodssp.daps.mil</a> or from the Standardization Document Order Desk, 700 Robbins Avenue, Building 4D, Philadelphia, PA 19111-5094.)

2.2.2 Other Government documents, drawings, and publications. The following other Government document forms a part of this document to the extent specified herein. Unless otherwise specified, the issue is that cited in the solicitation or contract.

# CODE OF FEDERAL REGULATIONS (CFR)

40 CFR - Protection of the Environment

(Copies of this document are available from the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402-0001.)

2.3 <u>Non-Government publications</u>. The following documents form a part of this document to the extent specified herein. Unless otherwise specified, the issues of these documents are those cited in the solicitation or contract.

2.4 Order of precedence. In the event of a conflict between the text of this document and the references cited herein, the text of this document takes precedence. Nothing in this document, however, supersedes applicable laws and regulations unless a specific exemption has been obtained.

# 3. REQUIREMENTS

- 3.1 <u>Qualification</u>. The cleaning compound furnished under this specification shall be products that are manufactured by a manufacturer authorized by the qualifying activity for listing on the applicable qualified products list before contract award (see 4.3 and 6.3).
- 3.2 <u>Materials</u>. The cleaning compounds shall not contain known or suspected carcinogens, ozone depleting substances, hazardous air pollutants, volatile organic compounds, or total toxic organic (TTO) compounds as specified in 40 CFR. Surface-active agents used in the cleaning compounds shall be not less than 85 percent biodegradable when determined in accordance with methods appropriate to surface-active agent type.
- 3.3 <u>Unit of issue</u>. To interface with existing equipment and meet the required storage characteristics, the cleaning compounds shall be furnished in 5-, 15-, or 55-gallon containers. The internal surfaces of all containers shall be protected with a material that shall not adversely affect nor be adversely affected by the cleaning compounds.
- 3.4 <u>Markings</u>. Markings to identify type I and type II cleaning compounds shall appear on each container to indicate that the product should not be used at full strength.

# 3.5 Performance requirements.

- 3.5.1 <u>Biodegradability</u>. The supplier of the cleaning compounds shall ensure that the surfactants used in the cleaning compound are biodegradable in accordance with 40 CFR, Part 796, subpart D. Testing for biodegradability shall be in accordance with 4.5.1. The cleaning compounds shall meet the requirement of not less than 85 percent biodegradable at the end of the 28-day period specified in 4.5.1.
- 3.5.2 Nonvolatile content. The cleaning compound qualification sample shall be tested for nonvolatile content in accordance with 4.3. Conformance inspection results shall not differ from the qualification values by more than  $\pm$  1.0 percentage points.

### 3.5.3 Flash point

1 1

- 3.5.3.1 <u>Type I</u>. The Pensky-Martens flash point of the concentrated liquid cleaning compound shall be greater than 212 °F (100 °C) when tested in accordance with 4.3.
- 3.5.3.2 <u>Type II</u>. The Setaflash flash point of the concentrated powdered cleaning compound shall be greater than 212 °F (100 °C) when tested in accordance with 4.3.
- 3.5.4 pH. The pH of the cleaning compounds shall be tested using the manufacturer's recommended cleaning concentration in accordance with 4.3. Conformance inspection results shall not differ from the qualification values by more than  $\pm$  0.5 units.
- 3.5.5 <u>Foaming characteristics</u>. At the manufacturer's recommended concentration, the cleaning compounds shall produce a foam volume of not more than 100 ml, when tested at 120 °F (49 °C) and 160 °F (71 °C) in accordance with 4.5.2.

# 3.5.6 Corrosivity.

- 3.5.6.1 <u>Titanium stress corrosion</u>. The cleaning compounds shall not produce any microscopic cracking when tested at the manufacturer's recommended concentration and examined metallographically at 500X magnification (see 4.3).
- 3.5.6.2 <u>Total immersion corrosion</u>. The cleaning compounds shall cause neither visual corrosion nor a weight change of any specimen greater than that shown in table I, when tested at the manufacturer's recommended concentration and in accordance with 4.5.3.

Table I. Total immersion corrosion weight changes.

| Test panel material                        | Former designation       | Allowable weight change (mg/cm²/24 hours) |

| Titanium (SAE-AMS-T-9046, type III,comp C) | Type I, 6Al 4V           | 0.04                                      |

3.5.6.3 Hydrogen embrittlement. When tested at the manufacturer's recommended concentration in accordance with 4.5.4, neither cadmium plated AISI 4340 steel specimens nor IVD aluminum coated AISI 4340 steel specimens shall exhibit embrittlement. Four specimens of each coating shall be tested using either the sustained load procedure or the step load procedure. For the sustained load procedure, embrittlement is indicated if a specimen fractures in less than 200 hours when loaded to 75 percent notched fracture strength. If only one of the four specimens fractures, step load the remaining three specimens at 5 percent of the notched fracture strength per hour to failure. If these three specimens achieve 90 percent for 1 hour, the chemical shall be considered non-embrittling, For the step load procedure, embrittlement is indicated if a specimen fractures at less than 90 percent of notched fracture strength.

### 3.5.7 Stability.

- 3.5.7.1 <u>Hard water stability</u>. When tested at the manufacturer's recommended concentration and as specified in 4.5.5, the cleaning compound shall not cause any corrosion of SAE-AMS-A-250/4 aluminum in excess of that allowed in table I.
- 3.5.7.2 Storage stability. When tested as specified in 4.5.6 and after a 12 month storage period, the type I cleaning compound shall not exhibit any separation, crystallization, or other deterioration of the cleaning compound or container. The type II cleaning compound shall not exhibit any deterioration of the cleaning compound or container. Stored cleaning compounds shall not fail the total immersion corrosion (3.5.6.2) or cleaning efficiency (3.5.8) requirements. For cleaning efficiency, only the MIL-G-21164 soil shall be tested.
- 3.5.7.3 Accelerated storage stability. After being tested for accelerated storage as specified in 4.5.7, the test sample shall show no marked change in color or uniformity when compared to the control and shall meet the cleaning efficiency requirement for the MIL-G-21164 soil specified in 3.5.8.
- 3.5.8 <u>Cleaning efficiency</u>. The cleaning compound shall remove not less than 80 percent of unbaked grease in accordance with MIL-G-21164 and not less than 95 percent of baked Alox 2028, when tested at the manufacturer's recommended concentration as specified in 4.5.8.
- 3.5.9 Oil separation. The oil layer shall be not less than 9 and be not greater than 13 milliliters, when tested as specified in 4.5.9.
- 3.5.10 <u>Workmanship</u>. When examined visually at room temperature, the type I cleaning compound shall be a homogeneous liquid free of foreign matter. A faint turbidity shall not be cause for rejection. When examined visually at room temperature, the type II cleaning compound should be free-flowing, lump-free, and free from foreign materials. Upon mixing, the cleaner shall form a liquid with no solid sediment.

3.5.11 <u>Service evaluation</u>. Upon completion of all other tests herein, with the exception of storage stability (see 3.5.7.2), the qualifying activity may request a full evaluation of the cleaning compounds by an aircraft depot maintenance facility (Navy, Air Force, Army, or commercial) in accordance with 4.5.10. The cleaning compounds performance shall be equal to or better than an existing qualified product chosen by the maintenance facility.

### 4. VERIFICATION

- 4.1 <u>Classification of inspections</u>. The inspection requirements specified herein are classified as follows:
  - a. Qualification inspection (see 4.3).
  - b. Conformance inspection (see 4.4).
- 4.2 <u>Inspection conditions</u>. Unless otherwise specified, all inspections shall be performed in accordance with standard conditions. Standard conditions shall be a temperature of  $72 \pm 4^{\circ}F$  (22 ± 2 °C) and a relative humidity of 50 ±20 percent.
- 4.3 <u>Qualification inspections</u>. Qualification inspection shall consist of all the tests specified in table II. At the discretion of the qualifying activity, service evaluation of the cleaning compound may be required.

TABLE II. Qualification inspection.

| Characteristic                | Requirement paragraph | Test method or paragraph  |
|-------------------------------|-----------------------|---------------------------|
| Biodegradability              | 3.5.1                 | 4.5.1                     |
| Nonvolatile content 1/        | 3.5.2                 | ASTM-D2834                |
| Flash point (type I)          | 3.5.3.1               | ASTM-D93                  |
| Flash point (type II)         | 3.5. 3.2              | ASTM-D3278                |
| РН                            | 3.5.4                 | ASTM-E70                  |
| Foaming                       | 3.5.5                 | 4.5.2                     |

| Total immersion corrosion 3/  | 3.5.6.2               | ASTM-F483                 |
| Hydrogen embrittlement 4/     | 3.5.6.3               | ASTM-F519                 |
| Hard water stability          | 3.5.7.1               | 4.5.5                     |
| Storage stability             | 3.5.7.2               | ASTM-F1104 and 4.5.6      |
| Accelerated storage stability | 3.5.7.3               | 4.5.7                     |
| Cleaning efficiency           | 3.5.8                 | 4.5.8                     |
| Oil separation                | 3.5.9                 | 4.5.9                     |
| Workmanship                   | 3.5.10                |                           |
| Service evaluation            | 3.5.11                | Visual examination 4.5.10 |

- 1/ Nonvolatile content shall be determined using 2- to 3-gram sample weights, 100-mm diameter glass Petri dishes, and a forced draft oven at 105 ±2 °C (221 ± 4 °F) for 16 hours.
- 2/ At 500X magnification
- 3/ As modified in 4.5.3
- 4/ As modified in 4.5.4
- 4.3.1 <u>Samples</u>. Qualification test samples shall consist of two 1-gallon containers of the type in which the manufacturer intends to supply contract quantities of the cleaner(s).
- 4.4 <u>Conformance inspection</u>. The cleaning compound acquired by the Government under this specification shall be source inspected in accordance with 4.4.2 to ensure the material meets the conformance inspection prior to shipment from the manufacturer's plant.
- 4.4.1 <u>Sampling</u>. Two containers of cleaning compound shall be randomly selected from each lot and tested as specified in 4.4.2.
- 4.4.2 <u>Testing</u>. Samples selected in accordance with 4.4.1 shall be tested in accordance with the test methods specified in table III. Each sample selected shall be thoroughly mixed prior to testing. Failure of either sample to conform to any requirement of this specification shall be cause for rejection of the lot represented by these samples.

TABLE III. Conformance inspection.

| Inspection                           | Requirement paragraph | Test method or paragraph |
|--------------------------------------|-----------------------|--------------------------|
| Nonvolatile content 1/               | 3.5.2                 | ASTM-D2834               |
| Flash point (Type I)                 | 3.5.3.1               | ASTM-D93                 |
| Flash point (Type II)                | 3.5.3.2               | ASTM-D3278               |
| рН                                   | 3.5.4                 | ASTM-E70                 |
| Foaming                              | 3.5.5.5               | 4.5.2                    |
| Titanium stress corrosion            | 3.5.6.1               | ASTM-F945                |
| Total immersion corrosion <u>2</u> / | 3.5.6.2               | ASTM-F483                |

1/ Nonvolatile content shall be determined using 2- to 3-gram sample weights, 100-mm diameter glass Petri dishes, and a forced draft oven at  $221 \pm 4$  °F  $(105 \pm 2$  °C) for 16 hours. 2/ As modified in 4.5.3.

# 4.5 Methods of inspection.

4.5.1 <u>Biodegradability</u>. Biodegradation of the concentrated cleaning compounds shall be determined over 28 days by the "Shake Flask Biodegradation Tests" for measuring ultimate or ready degradation potential, monitored by analysis of total organic carbon (TOC), as found in

EPA Chemical Fate Test Guidelines 40 CFR, Method 796.3100 (Aerobic Aquatic Biodegradation Test) or 40 CFR, Method 796.3240 (OECD Screening Test for Ready Biodegradability). Biodegradability shall be shown as carbon transformation by both soluble organic carbon reduction and CO<sub>2</sub> evolution.

- 4.5.2 Foaming. One hundred milliliters (ml) of cleaning solution (prepared in accordance with the manufacturer's instructions) shall be placed in a blender container and conditioned at  $160 \pm 2$  °F ( $71 \pm 1$  °C) for 1 hour. The blender shall then be turned on for 2 minutes at 8000  $\pm 1000$  rotations per minute. After 2 minutes, the blender shall be turned off and the foam volume shall be determined immediately by reading a graduated scale on the blender container. The test shall be repeated at  $120 \pm 2$  °F ( $49 \pm 1$  °C).
- 4.5.3 <u>Total immersion corrosion</u>. The cleaning compounds shall be diluted to the manufacturer's recommended cleaning concentration. Corrosion specimens that are not plated, anodized, or conversion coated (including magnesium specimens) shall be polished with 240-grit aluminum oxide or silicon carbide paper or cloth. Specimens shall be cleaned with MIL-PRF-680 followed by isopropyl alcohol and exposed as specified in ASTM-F483, except that the cleaning solution shall be heated to  $160 \pm 2$  °F ( $71 \pm 1$  °C) prior to and during the test. After 24 hours, the panels shall be removed, cleaned, and weighed in accordance to ASTM-F483.
- 4.5.4 <u>Hydrogen embrittlement</u>. Hydrogen embrittlement shall be determined in accordance with ASTM-F519, using AISI 4340, type 1a or 1e specimens.
- 4.5.4.1 <u>Specimen coating</u>. Cadmium-plated specimens shall be prepared as specified using treatment B, without conversion coating. Ion vapor deposited (IVD) aluminum specimens shall be prepared in accordance with MIL-DTL-83488, class 2, type II. The coatings shall cover the notch and surfaces within 0.5 inch of the notch; threaded surfaces shall not be coated. Cadmium-plated specimens shall be baked in accordance with ASTM-F519.
- 4.5.4.2 <u>Procedure</u>. Four specimens for each coating shall be individually exposed, immediately dried, then immediately tested for embrittlement. Exposure shall consist of immersion in a glass beaker containing fresh cleaning solution per product (at the manufacturer's recommended concentration) at  $160 \pm 2$  °F ( $71 \pm 1$  °C) for 30 minutes. Specimens shall be dried without rinsing at ambient conditions for five minutes. Embrittlement testing shall consist of applying a load equivalent to 75 percent of notch fracture strength for 200 hours; or, a load equivalent to 45 percent of notch fracture strength shall be applied for 24 hours, then stepped an additional 5 percent of notch fracture strength each hour until failure. Failure shall be as indicated in 3.5.6.3.

# 4.5.5 <u>Hard water stability</u>.

4.5.5.1 Preparation of hard water stock solution. A 10-grain hard water stock solution shall be prepared by dissolving  $0.20 \pm 0.005$  gram of analytical reagent grade calcium acetate

 $(Ca(C_2H_3O_2)_2 \cdot H_2O)$  and  $0.14 \pm 0.005$  gram of analytical reagent grade magnesium sulfate  $(MgSO_2 \cdot 7H_2O)$  in one liter of boiled distilled water.

- 4.5.5.2 <u>Procedure</u>. In a capped polymethylpentene (PMP) container, prepare 250 ml of total solution by diluting the cleaner concentrate with the prepared hard water stock solution to achieve the manufacturer's recommended concentration. Screw on the cap and shake the container vigorously for 15 seconds, place in a  $160 \pm 2$  °F ( $71 \pm 1$  °C) oven for two hours, then allow to stand undisturbed for 16 hours at room temperature. Test the solution for corrosivity on SAE-AMS-A-250/4 aluminum test panels as specified in 4.5.3.
- 4.5.6 Storage stability. Both types of cleaning compounds shall be stored in their original containers as furnished by the manufacturer. After 12 months of storage in accordance with ASTM-F1104, the cleaning compounds shall be examined for any type of deterioration of the cleaning compounds or of the containers. In addition, a sample of the stored cleaning compounds shall be used to perform the total immersion corrosion test on bare and anodized aluminum alloy (see table II). Finally, the sample shall be tested for cleaning efficiency using only the MIL-G-21164 soil (see 4.5.8) for conformance to the requirements of this specification.

### 4.5.7 Accelerated storage stability.

- 4.5.7.1 <u>Preparation of test sample</u>. For type I cleaners, a 150-ml portion of well-shaken concentrated cleaning compound shall be poured into each of two clean 500 ml clear, round, screw cap polymethylpentene (PMP) bottles with an outside diameter of 2.5 inches. One bottle shall be immediately capped and stored in the dark at room temperature for a minimum of 6 days (control sample). The second bottle is the test sample. For type II cleaners, place the powder in a dry capped container and proceed as for type I cleaners.
- 4.5.7.2 Procedure. The test sample shall be placed in a water bath heated to  $140 \pm 4$  °F ( $60 \pm 2$  °C) and held at that temperature for not less than 8 hours. The bath shall then be cooled to room temperature over the next 16 hours. This procedure shall be repeated every day for 5 additional days. After exposure for a total of 6 cycles, the test sample shall be removed from the bath and visually examined for degradation of the cleaning compound. The test sample shall be recapped and, along with the control sample, thoroughly shaken for 1 minute, allowed to stand undisturbed at room temperature for a minimum of 1 hour, then be compared to the control sample. When the test sample is in compliance with the visual requirements of 3.5.7.3, it shall be tested for cleaning efficiency using only the MIL-G-21164 soil (see 4.5.8) for conformance to the requirements of this specification.
- 4.5.8 <u>Cleaning efficiency</u>. The cleaning compound solution shall be prepared by diluting the concentrated cleaning compound to the manufacturer's recommended cleaning concentration with hard water stock solution (see 4.5.5.1).

- 4.5.8.1 MIL-G-21164 grease. Molybdenum disulfide grease soil shall be prepared by blending 50 grams of Raven 1040 carbon black (see 6.5) or equal as approved by the qualifing activity and 500 grams of grease in accordance with MIL-G-21164 with a mechanical grease worker for 15 minutes.
  - 4.5.8.2 Alox 2028. Alox 2028 (see 6.5) shall be used as a soil, as received.
- 4.5.8.3 Test coupons. Test coupons shall be aluminum or stainless steel 0.25 by 1.0 by 4.0 inches with a 0.0625-inch deep rectangular depression 0.75 by 2.75 inches, located 0.375 inches from one end. Prior to soil application, the coupons shall be solvent wiped with acetone (dimethylketone) using wipes in accordance with CCC-C-46, class 7. The pre-cleaning shall continue until the wipe is free of visual residue. The coupons shall be dried in an oven at  $221 \pm 4$  °F ( $105 \pm 2$  °C) for 30 minutes. The coupons shall then be removed from the oven, air-cooled to room temperature, and weighed to the nearest 0.1 mg (W<sub>1</sub>).
- 4.5.8.4 <u>Apparatus</u>. The cleaning apparatus shall consist of a 600 ml beaker, heavy-duty glass beaker, a 2-inch long by 0.375-inch diameter cylindrical magnetic stirring bar, a test coupon, and a digital stirrer/hot plate with speed and temperature controls.
- 4.5.8.5 Soil removal. Test coupons shall be loaded (using a clean acid brush) by brushing the entire bottom of the depression with a test soil to give a uniform film. Avoid contact with the vertical edges. Following the conditioning in table IV, the coupons shall be weighed (W<sub>2</sub>). Use only test coupons with soil weights between 100 and 150 mg. Prepare the cleaning solution by diluting the cleaning compounds to the manufacturer's recommended concentration using synthetic hard water as described in 4.5.5.1. Add 500 ml of the cleaning solution and stirring bar to the beaker and stabilize at  $160 \pm 2$  °F ( $71 \pm 1$  °C) using the stirrer/hot plate. Clamp the 3 coupons to the side of the beaker so that the soiled depression is fully immersed. Set the stirring speed at 500 rpm and continue stirring for 10 minutes. Rinse the specimen as indicated in table IV.

TABLE IV. Conditioning and rinsing.

| SOIL        | CONDITIONING  | RINSING  |
|-------------|---|--|
| MIL-G-21164 | None  | Remove the test coupon from the beaker and immediately rinse for one minute under a 4-liter/minute water stream from a laboratory faucet with serrated tip. The test coupon shall be 10-12 inches from the tip and held 45° to the water stream. |
| Alox 2028   | 1 hour at 221 °F (105 °C); Air-cool to room temperature | Pour the solution from the beaker and immediately place the beaker with coupon under flowing cold tap water for one minute without impinging on the soiled area.   |

Soils shall be cleaned sequentially in the same prepared solution, with coupons soiled with MIL-G-21164 grease, followed by coupons soiled with Alox 2028.

Dry the coupons for 5 minutes at  $105 \pm 2$  °C ( $221 \pm 5$  °F), cool, and then weigh (W<sub>3</sub>). The cleaning efficiency result for each of the two soils shall be an average of three test coupons. Calculate coupon cleaning efficiency (CE) as follows:

CE (%) = 
$$\frac{(W_2 - W_3)}{(W_2 - W_1)}$$
 x 100

- 4.5.9 Oil separation. Prepare a 100 ml sample of the manufacturer's recommended concentration of the cleaning compound in a stoppered 100 ml graduated cylinder. Discard 10 ml of the solution and replace it with 10 ml of hydraulic fluid in accordance with MIL-PRF-83282. Place the cylinder in a forced convection oven at  $160 \pm 2$  °F ( $71 \pm 1$  °C) for one hour. Remove the cylinder from the oven, shake it vigorously for 10 seconds, and allow it to stand at room temperature for one hour. After one hour, observe and record the volume of the top (oil) layer.
- 4.5.10 Service test. Service testing may be performed at a military aviation depot using an automated parts washer on soiled parts which are typical of those cleaned at the depot. Alternatively, artificially soiled parts may be prepared using fluids normally encountered in service to coat clean parts. In either case, results for the product being tested shall be compared to the results for a product which is already qualified to this specification.

# 5. PACKAGING

5.1 <u>Packaging</u>. For acquisition purposes, the packaging requirements shall be as specified in the contract or order (see 6.2). When actual packaging of materiel is to be performed by DoD or in-house contractor personnel, these personnel need to contact the responsible packaging activity to ascertain packaging requirements. Packaging requirements are maintained by the Inventory Control Point's packaging activities within the Military Service or Defense Agency, or within the military service's system commands. Packaging data retrieval is available from the managing Military Department's or Defense Agency's automated packaging files, CD-ROM products, or by contacting the responsible packaging activity.

### 6. NOTES

(This section contains information of a general or explanatory nature that may be helpful, but is not mandatory.)

6.1 <u>Intended use</u>. The cleaning compounds covered by this specification are used in the maintenance of military aircraft exposed for prolonged periods to extreme seagoing environments not encountered by civilian aircraft. The cleaning compound is intended for use in parts washers

and spray cabinets for cleaning aviation weapons systems, and engine and support equipment components. The cleaning compound will remove oily contaminants which are present on disassembled components.

- 6.2 Acquisition requirements. Acquisition documents should specify the following:
  - a. Title, number, and date of this specification.
  - b. Type of cleaning compound required (see 1.2).
  - c. Unit of issue required (see 3.3).
  - d. Quantity required.
  - e. Packaging requirements (see 5.1).
- 6.3 Solution test kit use. The following test kit components and procedures can be used to maintain the cleaning solution in a tank by replenishment with the concentrated cleaning compound:

25 ml measuring vial

5 ml measuring vial

50 ml chemical resistant plastic flask

25 ml dropper bottle of 0.5 percent phenolphthalein indicator

100 ml dropper bottle of 1.0 N sulfuric acid.

- 6.3.1 <u>Procedure</u>. This procedure requires the user to make a chart using titration for the product being used, if one has not been made previously. Using this chart and titration results on a questionable tank solution, the amount of cleaner concentrate to be added to the tank can be calculated.
- 6.3.1.1 Chart. Make up the manufacturer's recommended concentration (RC) and make sure it is well dissolved. Take the appropriate sample size (20 ml for a liquid and 5 ml for a powder), add it to the flask, then add 6 drops of indicator. Add the sulfuric acid solution a drop at a time, swirling the mixture after each drop. Count the number of drops (D) it takes until the pink color is completely gone (use a sheet of white paper under the flask to help see the color). Repeat this procedure to make sure that you have done this correctly. Mark this point on simple graph paper and draw a straight line to the origin (see example below).

- 6.3.1.2 Determining the concentration of the cleaner solution. Take a sample of the questionable cleaning solution: 20 ml for a type I solution or 5 ml for a type II solution. Pour the sample into a clean 50 ml plastic flask. Add 6 drops of indicator to the flask and swirl to mix. The solution will be a pink or red pink color. Add the sulfuric acid solution a drop at a time, swirling the mixture after each drop. Count the number of drops it takes until the pink color is completely gone. Using the chart above, determine the concentration of the sample by finding the number of drops on the horizontal axis and the corresponding concentration on the vertical axis.
- 6.3.1.3 Determine the amount of cleaner concentrate to add. Suppose the parts washer has a 150 gallon tank of cleaning solution made up using a type I product designed to be used at 7.5 oz/gal (fluid ounces per gallon). You would use the larger vial to take a 20 ml sample from the tank. After pouring that sample into the flask and adding the correct amount of indicator, you find that it takes a certain number drops of acid to cause the color to change. Suppose your chart indicates the cleaner concentration in the parts washer is 5.0 ounces per gallon (oz/gal). If you want to bring the concentration back up to 7.5 oz/gal, you need to calculate the makeup volume of cleaner to add to the tank. Subtract the indicated concentration from the desired concentration then multiply by the volume of the tank:

Volume = 
$$(7.5 - 5.0)$$
 oz/gal X 150 gal = 375 oz (or 2.9 gal)

This is the volume of cleaner concentrate that must be added to the tank. If the total of all makeup additions is more than the amount of cleaner initially charged to the tank, the tank should be dumped, cleaned, and recharged with fresh cleaner and water.

- 6.4 Qualification. With respect to products requiring qualification, awards will be made only for products which are, at the time of award of contract, qualified for inclusion in Qualified Products List QPL-29602 whether or not such products have actually been so listed by that date. The attention of the contractors is called to these requirements, and manufacturers are urged to arrange to have the products that they propose to offer to the Federal Government tested for qualification in order that they may be eligible to be awarded contracts or orders for products covered by this specification. Information pertaining to qualification of products may be obtained from the Naval Air Warfare Center Aircraft Division, Building 2188, 48066 Shaw Road, Unit 5, Patuxent River, MD 20670-1908.
- 6.4.1 <u>Inspection reports and additional information</u>. When authorizing the forwarding of qualification samples, the qualifying activity will require the manufacturer to submit, along with the samples, the following:
  - a. Two copies of the manufacturer's test report containing complete test data showing that the material submitted for qualification conforms to the requirements of this specification.
  - b. Certification that the cleaning compound contains no carcinogens, ozone depleting substances, hazardous air pollutants, volatile organic compounds, or total toxic organic and is biodegradable (see 3.2).

- c. Material safety data sheets prepared in accordance with FED-STD-313 (see 6.8)
- d. Two copies of the manufacturer's instructions for use of the cleaning compound.
- e. A proven method for determining and maintaining the proper concentration of cleaning compounds in the parts washer.

The samples must be plainly and durably marked with the following information and forwarded to the test facility identified in the letter of authorization to submit samples:

- · Sample for qualification inspection
- CLEANING COMPOUND, PARTS WASHERS AND SPRAY CABINETS
- Specification MIL-PRF-29602A
- Type I or II, as applicable
- · Manufacturer's name and address
- Manufacturer's product identification
- Manufacturer's recommended dilution
- Batch number
- Date of manufacture
- Submitted by (name and date) for qualification inspection in accordance with the requirements of MIL-PRF-29602A under authorization of (reference authorization letter).

#### 6.5 Supplier information.

Table V. <u>Item supplier information</u>.

| Item                               | Identification    | Supplier         | Location          |
|------------------------------------|-------------------|------------------|-------------------|
| Measuring vial, 25 ml              | Cat. No. 2172-40  |                  | Loveland, CO      |
| Measuring vial, 5 ml               | Cat. No. 2172-38  | Hach Company     | ĺ                 |
| Plastic flask, chemical resistant, | Cat. No. 20898-71 |                  |                   |
| 50 ml                              |                   |                  |                   |
| Dropper bottle of 0.5%             | Cat. No. 162-36   |                  |                   |
| phenolphthalein indicator, 25 ml   |                   |                  |                   |
| Dropper bottle of 1.0 N sulfuric   | Cat. No. 1270-26  |                  |                   |
| acid, 100 ml                       |                   |                  |                   |
| Carbon black                       | Raven 1040        | Columbia Carbon  | Atlanta, GA       |
|                                    |                   | Company          | ,                 |
| Soil                               | Alox 2028         | Alox Corporation | Niagara Falls, NY |

6.6 <u>Retention of qualification</u>. To retain qualification of the products approved for listing on the QPL, the manufacturer will verify by certification to the qualifying activity that the manufacturer's product complies with the requirements of this specification. The time of periodic verification by certification will be every two years from the date of original

qualification and will be initiated by the Government. The Government reserves the right to reexamine the qualified product whenever deemed necessary to ensure that the product continues to meet any or all of the specification requirements.

- 6.7 <u>Lot formation</u>. Unless otherwise specified, a lot consists of all the cleaning compound produced by one manufacturer, at one plant, from the same materials and under essentially the same conditions, provided the operation is continuous and does not exceed a 24 hour period. In the event the process is a batch operation, each batch will constitute a lot.
- 6.8 <u>Toxicity</u>. The cleaning compounds, when used for their intended purpose, must have no adverse effect on the health of personnel. Questions pertaining to this effect will be referred by the acquiring activity to the appropriate medical service who will act as an adviser to the contracting agency.
- 6.9 <u>Material Safety Data Sheets (MSDSs)</u>. MSDSs for items supplied to the Government will conform to FED-STD-313, Material Safety Data, Transportation Data and Disposal Data for Hazardous Materials Furnished to Government Activities.
  - 6.10 Subject term (key word) listing.

Aqueous Biodegradable Dilutable Service evaluation

6.11 <u>Changes from previous issue</u>. Marginal notations are not used in this revision to identify changes with respect to the previous issue due to the extent of the changes.

# Appendix B

**Test Data Sheet – Original Results** 

#### **Description of Tables**

While the cleaning efficiency tests were being conducted, all experimental observations were recorded directly on an Excel spreadsheet with a laptop computer in the cleaning laboratory. This section of the appendix contains all of the original data collected during execution of the cleaning efficiency tests. The information contained in these tables is explained below with the use of an actual example, Test #41.

During Test #41, the cleaning compound Axarel 58 was used, as indicated in the top row of the table below. The number appearing to the left of the compound name, 41, is the test number. The numbers to the right of the compound name (150, 100%, and 65.55556) indicate the temperature (degrees F), concentration (% by volume), and temperature (degrees C) of the cleaning solution used in the test, respectively. Directly below these numbers, a comment ("looked and felt completely clean") appears.

Directly below the compound name, two sections are presented, colored pink and yellow. The pink section represents Contaminant #1; the yellow section represents Contaminant #2. For each contaminant, three test coupons were used. The test coupon number and its precleaned weight for that specific test is recorded in the white section in between the colored rows. Then, directly below these rows, the weight of the test coupon loaded with contaminant before and after cleaning is recorded. For example, for Contaminant #1, the first test coupon used was #15. It had a precleaned weight of 40.7901 grams. After the test coupon was loaded with Contaminant #1, it weighed 40.9219 grams before it was cleaned, and 40.7950 grams after it was cleaned.

Test coupon #15, which was used for Contaminant #1, therefore saw a reduction in mass of 0.1318 grams before and after cleaning in Axarel 58, which corresponds to a cleaning efficiency of 0.96282246, or about 96.28%. These numbers can be found on the right hand side of the table. Test coupon #14 saw a reduction in mass of 0.144 grams; test coupon #13, 0.1405 grams. The average cleaning efficiency for all three coupons for Contaminant #1 is the mean of the cleaning efficiencies for test coupons #15, #14, and #13, and is equal to 0.972145 (or about 97.21%) and is highlighted in pink. The values for Contaminant #2 are located in similar positions on the table.

| 41 | Axarel 58                                       | 3       |         |         |  | 150        | 100%                             | 65.55556 |          |  |  |  |

# **Appendix C**

**Test Data Sheet – Revised Results** 

#### **Description of Tables**

While the cleaning efficiency tests were being conducted, all experimental observations were recorded directly on an Excel spreadsheet with a laptop computer in the cleaning laboratory. This section of the appendix contains all of the revised data collected during execution of the cleaning efficiency tests. The information contained in these tables is explained below with the use of an actual example, Test #41.

During Test #41, the cleaning compound Axarel 58 was used, as indicated in the top row of the table below. The number appearing to the left of the compound name, 41, is the test number. The numbers to the right of the compound name (150, 100%, and 65.55556) indicate the temperature (degrees F), concentration (% by volume), and temperature (degrees C) of the cleaning solution used in the test, respectively. Directly below these numbers, a comment ("looked and felt completely clean") appears.

Directly below the compound name, two sections are presented, colored pink and yellow. The pink section represents Contaminant #1; the yellow section represents Contaminant #2. For each contaminant, three test coupons were used. The test coupon number and its clean bare weight after a thorough final cleaning is recorded in the white section in between the colored rows (in the case of test coupons #22 - #27, the initial weight of the test coupon was used as the precleaned weight for Tests #1 - #8, as explained in the body of this report). Then, directly below these rows, the weight of the test coupon loaded with contaminant before and after cleaning is recorded. For example, for Contaminant #1, the first test coupon used was #15. It had a clean bare weight of 40.7883 grams after a thorough final cleaning. After the test coupon was loaded with Contaminant #1, it weighed 40.9219 grams before it was cleaned, and 40.7950 grams after it was cleaned.

Test coupon #15, which was used for Contaminant #1, therefore saw a reduction in mass of 0.1336 grams before and after cleaning in Axarel 58, which corresponds to a cleaning efficiency of 0.9498503, or about 94.99%. These numbers can be found on the right hand side of the table. Test coupon #14 saw a reduction in mass of 0.1448 grams; test coupon #13, 0.1436 grams. The average cleaning efficiency for all three coupons for Contaminant #1 is the mean of the cleaning efficiencies for test coupons #15, #14, and #13, and is equal to 0.958991 (or about 95.90%) and is highlighted in pink. The values for Contaminant #2 are located in similar positions on the table.

# Appendix D

Case Study – Explanation of Excessively High Cleaning Efficiencies

#### **Case Study**

Test coupon #8 was used in six separate test trials – 3, 13, 18, 26, 46, and 55. Before running any cleaning trials, the test coupon was precleaned using the procedure set forth in mil spec MIL-PRF-29602A. Before the test coupon was used for any cleaning efficiency tests, it weighed 39.5566 grams. The mass of the test coupon, after being cleaned according to the mil spec procedure in addition to an ultrasonic wash, was equal to the following values before using it in the following tests:

| Test # | Mass, grams |
|--------|-------------|
| 3      | 39.5566     |
| 13     | 39.5576     |
| 18     | 39.5563     |
| 26     | 39.5568     |
| 46     | 39.5571     |
| 55     | 39.5604     |

It should be noted that the cleaning procedure used in the mil spec – which calls for solvent wiping with acetone until the wipe is free of visual residue – was not sufficient to thoroughly clean the test coupon between some test trials. This was particularly evident between test trials #46 and #55, as it was 3.3 mg heavier for test trial #55. The cleaning chemistry in test trial #55 was a superior product that was able to clean the test coupon thoroughly, and it removed residual contamination that had not been removed prior to the start of the test, with the result that it weighed 39.5570 grams after the test trial, or 3.4 mg less than the precleaned mass at the start of the cleaning efficiency test. Because the cleaned test coupon weight with contaminant was less than the precleaned test coupon weight at the start of test trial #55, it appeared that this product had a cleaning efficiency equal to 102.48%, which cannot occur unless aluminum degradation or other substrate loss has occurred. The excess value of 2.48% is well above that level of error attributable to inaccuracies in linearity of the analytical balance, which could only account for an excess value of 0.32%. This latter value assumes that the test coupon weighs approximately 40 grams, and the degree of accuracy of the scale is +/- 0.2 mg.

At the conclusion of testing, all test coupons underwent a very thorough final cleaning, well beyond that required by the mil spec, using multiple cleanings in ultrasonic tanks, manual scrubbing with acetone, and wiping with cleanroom wipes. The last step of this final cleaning process was an ultrasonic wash followed by a rinse with no wiping, so as to eliminate the presence of wiper bits on the sharp edges of the coupon. The final weight of the bare, cleaned test coupon #8 was 39.5560 grams. This correlates to a cleaning efficiency of 99.29% for test #55, which is a reasonable value.

**Conclusion:** the precleaning procedure established in the mil spec is less effective in removing contaminants than some of the chemistries evaluated in this project. As a result, nominal cleaning efficiencies in some cases exceed 100% when using the calculation established in the mil spec. In order to correct this deficiency, only one value

should be used for the precleaned test coupon mass for all trials, which should be the value obtained from the very thorough cleaning procedure used at the conclusion of cleaning efficiency testing. The cleaning procedure in the mil spec should also be modified and expanded to ensure that all contaminants are removed from the test coupons.

# Appendix E

**Contact Information for Selected Cleaning Chemistries** 

#### **Contact Information for Selected Cleaning Chemistries**

As stated in the body of this report, several cleaning chemistries were evaluated in this project that did not appear the original test matrix provided by NASA to NC3R. These cleaning chemistries can be obtained by contacting the following individuals at the following phone numbers.
